Brief introduction of Goodrive300 inverter

Gooddrive300 series inverters are high performance open loop vector inverters for controlling asynchronous AC induction motors and permanent magnet synchronous motors. Applying the most advanced sensorless vector control technology which keeps pace with the leading international technology and DSP control system, the product enhances its reliability to meet the requirement of environment adaptability, customized and industrialized design with more optimized functions, more flexible application and more stable performance.

Ratings

3AC 380V: 1.5kW~500kW
3AC 660V: 22kW~630kW

Advantages

Combined Drive

Multi function with simple operation

Reliable quality certificated by TÜV SÜD

3 International Communication Protocols

Combined Drive

1. Compatible with multiple motors

Vector drive for asynchronous AC induction motors and permanent magnet synchronous motors. Reduce the inventory effectively without considering the motor compatibility.

Remarks:

- 1.The traditional permanent magnet synchronous motor includes SPM and IPM.
- 2.The variable frequency motor includes high speed spindle.

2. More Accurate Motor Autotuning

Correct rotating and static motor autotuning.
Convenient debugging,easy operation.

Rotating Autotuning	Static Autotuning
De-couple from the load Applied to the situation with high control accuracy	No need to de-couple from the load Applied when rotating autotuning is not available

4. Advanced Open Loop Vector Control

(1)Asynchronous Motor

Starting Torque	Dynamic Response	Speed Ratio	Steady Speed Accuracy
0.25Hz/150% of rated torque	<20ms	1 : 200	± 0.2%

(2) Synchronous Motor

The current, torque and rotating speed waveforms when sudden loading or unloading in asynchronous motor open loop vector control mode with 0.25Hz running frequency and full load.

3.Optimized SVPWM Control

The current, torque and rotating speed waveforms when sudden loading or unloading in asynchronous motor SVPWM control mode with 2Hz running frequency and full load.

Remarks:

- 1.The traditional permanent magnet synchronous motor includes SPM and IPM.
- 2.The variable frequency motor includes high speed spindle.

5.Torque Control Mode(open loop)

The current, torque and rotating speed waveforms when sudden loading or unloading in asynchronous motor torque control mode with full load.

The FWD/REV current, torque and rotating speed waveforms in synchronous motor torque control mode with 100Hz running frequency and full load.

6. More smoother and more quieter running by applying advanced 3-phase modulation

7. Excellent performance on specific motors such as High speed spindle, Direct-control motor

8. Perfect voltage and current control, reducing the fault protection times

OV Fault	OC Fault
Adjust the output frequency to avoid overvoltage of the DC bus during deceleration	Adjust the output frequency to avoid overcurrent of the inverter during acceleration

9. Multiple braking modes and instant stopping

Dynamic Braking	DC Braking	Flux Braking	Short Braking
Configure braking units and resistors	No need to configure braking units and resistors	No need to configure braking units and resistors	No need to configure braking units and resistors: quick braking
Available on the situation of big inertia load and frequent braking	Available on the situation when start the running motor after braking and the situation when keep the moment output after braking to zero speed	Available on the instant stopping situation with big inertia load and no frequent braking	Only available on quick braking of PM motor
Big braking torque and quick braking	Not available on the situation of big inertia load or instant stopping braking in high speed running	Not available on the situation of big inertia load and frequent and braking(the energy consumed on the stator and its cooling is better than DC braking)	The energy consumed on the stator and its cooling is better than DC braking

The current waveform in asynchronous motor SVPWM control mode with 100% braking current when the starting frequency is 10Hz and the braking time is 0.1s.

Flux braking current waveform when the running frequency is 50Hz, deceleration time is 0.1s with full load in asynchronous motor SVPWM control mode

10. Continuous running in instantaneous power off

The inverter can keep running if the grid voltage drops and used in the situation with high requirement such as fiberic and textile production line.

Multi-function with simple operation

1. Separate Air-duct

The separate air duct prevents the contaminants into the electronic parts/components and greatly improves the protective effect of the inverter, as well as its reliability and service life, to adapt various complicated site environments. It can also facilitate the heat-releasing in control cabinets and the heat-releasing design of the customer.

3. C3 input filters (standard for 380V inverters) and C2 filters(optional for 380V inverters)

For 380V inverters, C3 input filter is embedded in the factory to meet different application requirements, save installation space and avoid the electromagnetic interference caused by incorrect selection and site installation.

Remarks:
(1)C2 filter: EMC performance of the inverter achieves the limited usage requirement in civil environment.
(2)C3 filter: EMC performance of the inverter achieves the limited usage requirement in industrial environment.

2. Multiple Installation Modes

Wall, flange and floor installation

4. Book Structure

Parallel installation

Little installation space with less cost and beautiful appearance.

5. The rivet design ensures reliable integration connection

Greener
Stronger corrosion-resistance Proper grounding
Excellent EMC performance

6. Smaller Size

Due to the thermal simulation and advanced modularized design, the size of our product is reduced greatly. The width ratio between Goodrive300 and CHF100A is shown in the figure below (the Max. percentage is 50%)

7. Various external interfaces and swappable terminal board convenient for replacement and maintenance

9. Embedded braking units of 1.5-30kW inverters

Reduce the occupied space and dynamic braking is available if install corresponding braking resistors.

Note: Only for 380V inverters.

Terminals	Quantity	Features
ON-OFF input	8 channels	1KHz NPN and PNP
High speed pulse input	1 channel	50KHz NPN and PNP
Analog input	3 channels	0~10V, 0~20mA, -10V~+10V
ON-OFF output	1 channel	Max. output frequency:1KHz
High speed puls output	1 channel	Max. output frequency:50KHz
Analog output	2 channels	0~10V, 0~20MA
Relay output	2 channels	3A/250DAC, 1A/30VDC, NO+NC

8. High Performance Keypad

The standard LED keypad supports parameters loading and unloading with Max. length of 200m and digital potentiometer. The optional external LCD keypad supports parameters loading and unloading with displaying 10 lines and 10 rows of Chinese characters and several languages

10. Supporting common DC bus

Reduce the power lost on DBR
Note the impact current and the capacity of the input AC system

11. Available on DC power supply

12. Heavy-load Design

13. Various Application Function

Function	Effect
V·f separation setting	Meet the requirement of different power supplied and realize flexible setting to V/F curves
Two sets of motor parameters	Different motors can use the same inverter, reducing the cost, shifting between two motors making electrical control more convenient
Virtual terminal function	Make the middle variables as the local virtual I/O quantity, save the hardware configuration
Speed Tracking	Available on asynchronous motor and permanent magnet synchronous motor and the situation of big inertia load, reversal rotating during starting and continuous frequent shifting
Delay ON/OFF signal, high speed pulse and relay	Provide more programmable and control modes
Energy Displaying	Display the total consumed energy. No need to use the power meter
Stopping Delay	Ensure the motor is under control and stops safely

Reliable quality certificated by TÜV SÜD

1. The product design follows IEC national standards and passes the CE test of international authority TÜV SÜD, INVT is the unique manufacturer having TÜV-MARK marks in Chinese industrial control field

Remarks: 1. Each Gooddrive300 inverter has past the test certification. Only the inverters of 380V has passed CE certification and the inverters of 660V has no CE certification.
2. Visit http://www.tuev-sued.de/industry_and_consumer_products/certificates for the TUV certifications.

2. Advanced thermal technology makes exact thermal design

3. Perfect and reliable test system ensure products adapt complicated site environments and INVT is the only manufacturer achieved ACT certificate of TÜV SÜD

Experiment Type	Experiment Name	Classification
Mechanical Reliability Experiments	Packaging Experiments	Package compression experiments Package Resonance imaging and storage test Package random vibration test Package dropping test Package rolling test Package dumping test Package inclined impact test
	Impact Test	Half-sine shock test(working and non-working state) Trapezoidal wave impulse test(non-working state)
	Vibration Test	Sinusoidal vibration test(working state) Random vibration test(working and non-working state)
	Temperature Experiment	Low temperature storage test High temperature storage test Low temperature experiments High temperature experiments Temperature gradient experiments Temperature impact test
	Thermal Test	Constant thermal test Alternation thermal test
	Salt Spray Test	Constant salt spray test Alternation salt spray test
	Low Air Pressure Test	Low temperature and low pressure test High temperature and low pressure test
Climatic Environmental Reliability Test		

Remarks :

The full name of ACT is Acceptance of Client's Testing, which means the German TÜV SÜD admit the technology level of the lab and accept their separate testing data and test reports officially.

Electric Vibration System

Low Pressure Test Chamber
Constant temperature and humidity test chamber

Natural Convection Test Chamber
Thermal Shock Test Chamber

3 International Communication Protocols

1. Various communication modes: MODBUS communication (standard), PROFIBUS+Ethernet and CANopen+Ethernet communication (optional)

Following functions are available through communication cards:

- Send control commands(starting, stopping and fault reset) to the inverter
- Send speed or torque reference signal to the inverter
- Read the state and actual value from the inverter
- Modify the parameters of the inverter

2. PC Software

The software carries out tracking and fault location with the function of oscilloscope, making more convenient debugging and programming and facilitation the current monitoring, back analysis and engineering management.

Applications

Goodrive300 Applications

Permanent Magnet Synchronous Motor

Screw oil pumps, water pumps, compressors, hoisting, chemical fabric devices, plastic machinery, wood processing machinery and machine tools and so on

Mine

Belt conveyors, air compressors, crushers, ball mills, centrifugal dehydrators and so on

Machines Tools

Lathes, wood processing machinery, drilling machines, grinding machines, milling machines and air compressors and so on

Textile

Carding machines, drawing machines, roving machines, ring spinning and winding machines, warping machines, circle machines, warp knitting machines, dyeing and finishing machines, shuttleless loom machines, non-woven production lines and draw texturing machines, industrial washing machines and so on

Oil

Oil pumps, water injection pumps, compressors and so on

Other Machineries

Hoisting, chemical, industrial, metal processing, EPS and constructive machines and so on

Technical Specifications

Functions		Specifications	
Power input	Input voltage(V)	Voltage degree Un=380V	Voltage degree Un=660V
	Input frequency(Hz)	50Hz/60Hz Allowed range:47 ~ 63Hz	
Power output	Output voltage(V)	0~input voltage	
	Output frequency(Hz)	Standard:0 ~ 400Hz;(380V Goodrive300 special inverters for medium-frequency:0 ~ 3200Hz)	
Technical control feature	Control mode	SVPWM and SVC	
	Motor type	Asynchronous and permanent magnet synchronous motors	
	Speed ratio	Asynchronous motor 1:200 (SVC) synchronous motor 1:20 (SVC)	
	Speed control accuracy	± 0.2% (SVC)	
	Speed fluctuation	± 0.3%(SVC)	
	Torque response	<20ms(SVC)	
	Torque control accuracy	10%(SVC)	
	Starting torquee	Asynchronous motor: 0.25Hz/150%(SVC) Synchronous motor: 2.5 Hz/150%(SVC)	
	Overload capability	150% of rated current: 1 minute 180% of rated current: 10 seconds 200% of rated current: 1 second	
Running control feature	Frequency setting	Digital setting, analog setting, pulse frequency setting, multi-step speed running setting, simple PLC setting, PID setting, MODBUS communication setting, PROFIBUS communication setting and CANopen communication setting. Switch between the combination and single setting channel.	
	Auto-adjustment of the voltage	Keep constant voltage automatically when the grid voltage transients	
	Fault protection	Provide more than 30 fault protection functions: overcurrent, overvoltage, undervoltage, overheating, phase loss and overload, etc.	
	Restart after rotating speed tracking	Smooth starting of the rotating motor	

Technical Specifications

Remarks:

- (1)The input current of the inverter 380V 1.5~315kW is tested when the input voltage is 380V and there is no DC reactor and output/input reactor.
- (2)The output current of the inverter 380V 350~500kW is tested when the input voltage is 380V and there is input reactor.
- (3)Rated output current of 380V inverters is defined when the rated output voltage is 380V.
- (4)The input current of the inverter 660V 22~350kW is tested when the input voltage is 660V and there is no DC reactor and output/input reactor.
- (5)The output current of the inverter 660V 400~630kW is tested when the input voltage is 660V and there is input reactor.
- (6)Rated output current of 660V inverters is defined when the rated output voltage is 380V.

Optional Parts

1. Flange Mounting Panel
Optional for inverters of 380V 1.5~30kW in flange installation; not optional for inverters of 380V 37~200kW(660V 22~220kW) in flange installation

3. Installation bracket for the keypad
Use M3 screws or installation bracket to fix the keypad. The installation bracket of 380V 1.5~30kW inverters are optional, others are standard.

5. LCD keypad
10 rows of DH displaying Compatible with the LED keypad

7. Assistant Power (AC single phase 220V)
Provide for a safer and more convenient inverter debugging when the main power supply is power off(note as non-standard assistant power supply)
8. Reactor

The inverters of 380V 37kW or above and 660V can be connected with DC reactors. The reactor can improve the power factor and avoid damage to the rectifier bridge caused by overcurrent and damage to the rectifier circuit by harmonic

Remark:

- (1) Input EMI can meet C2 standard after installing input filters.
(2) Above parts and options are external, so it is necessary to order.

10. Braking system

The inverters of 380V 30kW and below are embedded internal braking units and the inverters of 380V 37kW and above need external braking units, please select the braking units according to actual use. External braking unit is needed for inverters of 660V. Please select the braking resistor according to site operation and torque requirements.

Model	Model of braking unit	Available braking resistor at 100% braking torque (Ω)	Dissipation power of braking resistor (kW) (10% braking)	Dissipation power of braking resistor (kW) (50% braking)	Dissipation power of braking resistor (kW) (80% braking)	Mini braking resistor (Ω)
