SINAMICS G120

Standard inverters 0.37 kW to 250 kW (0.5 hp to 400 hp)

SINAMICS G120 standard inverters

Overview

The SINAMICS G120 frequency inverter is designed to provide precise and cost-effective speed/torque control of AC motors.

With different device versions (frame sizes FSA to FSGX) in a power range from 0.37 kW to 250 kW (0.5 hp to 400 hp), it is suitable for a wide variety of drive solutions.

Examples of SINAMICS G120, frame sizes FSA, FSB and FSC; each with Power Module, Control Unit and Basic Operator Panel

Examples of SINAMICS G120, frame sizes FSD, FSE and FSF; each with Power Module, Control Unit and Basic Operator Panel

SINAMICS G120

Standard inverters 0.37 kW to 250 kW (0.5 hp to 400 hp)

SINAMICS G120 standard inverters

Overview

Examples of SINAMICS G120, frame size FSGX; with Power Module

Modularity

SINAMICS G120 is a modular inverter system comprising a variety of functional units. The main units are:

- the Control Unit (CU)
- the Power Module (PM)

The Control Unit controls and monitors the Power Module and the connected motor using several different control types that can be selected. It supports communication with a local or central control and monitoring devices.

The Power Module supplies the motor in a power range 0.37 kW to 250 kW (0.5 hp to 400 hp). The Power Module is controlled by a microprocessor in the Control Unit. State-of-the-art IGBT technology with pulse-width modulation is used to achieve the highest degree of reliability and flexible motor operation. Comprehensive protection functions provide a high degree of protection for the Power Module and the motor.

Furthermore, a large number of additional components are available, such as:

- Intelligent Operator Panel (IOP) for parameterizing, diagnosing, controlling and copying drive parameters
- Basic Operator Panel (BOP) for parameterizing, diagnosing, controlling and copying drive parameters
- Line filters, Classes A and B
- Line reactors
- Braking resistors
- Sine-wave filters
- Output reactors

Safety Integrated

The SINAMICS G120 standard inverters are available in a number of different versions for safety-related applications. All Power Modules are already designed for Safety Integrated. A Safety Integrated Drive can be created by combining a Power Module with the appropriate Fail-safe Control Unit.

The SINAMICS G120 fail-safe frequency inverter provides four safety functions, certified in accordance with EN 954-1, Category 3 and IEC 61508 SIL 2:

- Safe Torque Off (STO) to protect against active movement of the drive
- Safe Stop 1 (SS1) for continuous monitoring of a safe braking ramp
- Safely Limited Speed (SLS) for protection against dangerous movements when a speed limit is exceeded
- Safe Brake Control (SBC) for controlling motor brakes that are active in the de-energized state, e.g. motor holding brakes

The functions "Safe Stop 1" and "Safely Limited Speed" can both be implemented without having to use a motor sensor or encoder; the implementation cost is minimal. Existing systems in particular can be updated with safety technology without the need to change the motor or mechanical system.

The safety functions "Safely Limited Speed" and "Safe Stop 1" are not certified for pull-through loads as in the case of lifting gear and winders.

Additional information is provided in the part Highlights, section Safety Integrated.

Efficient Infeed Technology

The innovative Efficient Infeed Technology is used in PM250 and PM260 Power Modules. This technology allows the energy produced by motors operating in generator mode connected to standard inverters to be fed back into the supply system. Additional cooling and additional space requirement in the control cabinet can be avoided as components such as braking resistors, brake choppers and line reactors are not required. Further, wiring and engineering costs are significantly reduced. At the same time, considerable savings can be achieved in terms of energy consumption and operating costs.

Additional information is included in the part Highlights, section Efficient Infeed Technology.

Innovative cooling concept and coated electronic modules

The innovative cooling concept and coated electronic modules significantly increase the service life and usage time of the device. These features are based on the following principles:

- The power loss is exclusively dissipated using an external heat sink
- Electronic modules not located in air duct
- Standardized convection cooling of Control Unit
- All cooling air from the fan is directed through the heat sink

STARTER commissioning tool

The STARTER commissioning tool simplifies the commissioning and maintenance of SINAMICS G120 inverters. The operator guidance combined with comprehensive, user-friendly functions for the relevant drive solution allow you to commission the device quickly and easily.

SINAMICS G120

Standard inverters 0.37 kW to 250 kW (0.5 hp to 400 hp)

SINAMICS G120 standard inverters

Benefits

- Modularity ensures flexibility for a drive concept that is fit-for-the-future
 - Modules can be replaced under voltage (hot swapping)
 - Pluggable terminals
 - The modules can be easily replaced, which makes the system extremely service friendly.
- The safety functions make it easier to integrate drives into safety-oriented machines or plants
- Communications-capable via PROFINET or PROFIBUS with PROFIdrive Profile 4.0
 - Reduced number of interfaces
 - Plantwide engineering
 - Easy to handle
- The innovative circuit design (bidirectional input rectifier with "pared-down" DC link) allows the kinetic energy of a load to be fed back into the supply system when Power Modules PM250 and PM260 are used. This feedback capability provides enormous potential for savings because generated energy no longer has to be converted into heat in a braking resistor
- Innovative SiC semiconductor technology ensures that when a PM260 Power Module is used, the inverter is more compact than a comparable standard converter with an optional sine-wave filter for the same power rating
- An innovative cooling concept and coated electronic modules increase robustness and service life
 - External heatsink
 - Electronic components are not located in air duct
 - Control Unit that is completely cooled by convection
 - Additional coating of the most important components
- Simple unit replacement and quick copying of parameters using the optional Basic Operator Panel or the optional MMC memory card
- Quiet motor operation as a result of the high pulse frequency
- Compact, space-saving design
- Software parameters for simple adaptation to 50 Hz or 60 Hz motors (IEC or NEMA motors)
- 2-/3-wire control (static/pulsed signals) for universal control via digital inputs (only CU240 Control Units)
- Engineering and commissioning with uniform engineering tools such as SIZER, STARTER, and Drive ES: ensure fast engineering and easy commissioning – STARTER is integrated in STEP 7 with Drive ES Basic with all the advantages of central data storage and totally integrated communication
- Certified worldwide for compliance with CE, UL, cUL, c-tick and Safety Integrated according to IEC 61508 SIL 2

Applications

SINAMICS G120 is ideally suited

- as a universal drive in all industrial and commercial applications
- e.g. in the automotive, textile, printing and chemical industries
- for higher-level applications, e.g. in conveyor systems

Design

SINAMICS G120 standard inverters are modular frequency inverters for standard drives. Each SINAMICS G120 comprises two operative units – the Power Module and Control Unit. Each Control Unit can be combined with each Power Module.

Guidelines for module selection

The procedure to select a complete SINAMICS G120 frequency inverter should be as follows:

1. Select a suitable Control Unit (depending on the required communication, hardware and software version and safety functionality)
2. Select a suitable Power Module (depending on the power and technology required)
3. Select the optional and additional components. There are a large number of components for expanding the system (e.g. line-side power components, DC link components, load-side power components, and supplementary system components). However, it should be noted that not all of the components are required for all of the Power Modules (example: Braking resistors are not required for the PM250 and PM260 Power Modules!). The precise data is provided in the technical specifications tables of the particular components.

Control Units

The Control Unit performs closed-loop control functions for the inverter. In addition to the closed-loop control, it has additional functions that can be adapted to the particular application through parameterization.

Two series of Control Units are available for SINAMICS G120 corresponding to their software packages (CU230 and CU240). Each Control Unit comprises a defined I/O quantity structure, a special fieldbus interface and possible additional safety functions. The following Control Units and accessories are available for standard SINAMICS G120 inverters:

CU230 Control Units

The CU230P-2 Control Units have been specifically designed for pump, fan and compressor applications. The following three versions are available:

- CU230P-2 HVAC
- CU230P-2 DP
- CU230P-2 CAN

CU240 Control Units

Several Control Units are available in different versions:

- CU240E
- CU240S
- CU240S DP
- CU240S DP-F
- CU240S PN
- CU240S PN-F

Design**Power Modules**

The following Power Modules are available for the SINAMICS G120 standard inverters:

PM240 Power Modules

PM240 Power Modules (0.37 kW to 250 kW / 0.5 hp to 400 hp) feature an integrated brake chopper (for frame size FSGX external) and are designed for drives without energy recovery capability. Generator energy produced during braking is converted to heat via externally connected braking resistors.

PM250 Power Modules

PM250 Power Modules (7.5 kW to 90 kW / 10 hp to 125 hp) have an innovative circuit design which allows line-commutated energy recovery back into the line supply. This innovative circuit permits generator energy to be fed back into the supply system and therefore saves energy.

PM260 Power Modules

PM260 Power Modules (11 kW to 55 kW / 15 hp to 75 hp) also have an innovative circuit design which allows line-commutated energy recovery back into the line supply. This innovative circuit permits generator energy to be fed back into the supply system and therefore saves energy. The PM260 Power Modules also have an integrated sine-wave filter that limits the rate of rise of voltage and the capacitive charging/discharging currents usually associated with inverter operation.

Line-side power components

The following line-side power components are available for SINAMICS G120 standard inverters:

Line filters

With one of the additional line filters, the Power Module reaches a higher radio interference class.

Line reactors (for PM240 Power Modules only)

A line reactor reduces the system perturbations caused by harmonics. This particularly applies in the case of weak line supplies (line supply short-circuit power $u_K > 1\%$).

Recommended line components

This is a recommendation for additional line-side components, such as fuses and circuit-breakers (line-side components must be dimensioned in accordance with IEC standards). Additional information about the listed fuses and circuit breakers can be found in Catalogs LV 1 and LV 1 T.

DC link components

The following DC link components are available for the SINAMICS G120 standard inverters:

Braking Modules (only for PM240 Power Modules, frame size FSGX)

A Braking Module and the matching external braking resistor are required to bring drives with a PM240 Power Module, frame size FSGX to a controlled standstill in the event of a power failure (e.g. emergency retraction or EMERGENCY STOP Category 1) or limit the DC link voltage during a short period of generator operation. The Braking Module includes the power electronics and the associated control circuit.

Braking resistors (for PM240 Power Modules only)

Excess energy in the DC link is dissipated in the braking resistor. The braking resistors are designed for use with PM240 Power Modules. They are equipped with an integrated brake chopper (electronic switch). There is an optional plug-in Braking Module for frame size FSGX.

Load-side power components

The following load-side power components are available for the SINAMICS G120 standard inverters. This means that during operation with output reactors or sine-wave filters, longer, shielded motor cables are possible and the motor service life can be extended:

Output reactors (for PM240 and PM250 Power Modules only)

Output reactors reduce the voltage stress on the motor windings. At the same time, the capacitive charging/discharging currents, which place an additional load on the power unit when long motor cables are used, are reduced.

Sine-wave filter (not for PM260 Power Modules)

The sine-wave filter limits the rate of rise of voltage and the capacitive charging/discharging currents that usually occur with inverter operation. An output reactor is not required.

SINAMICS G120

Standard inverters 0.37 kW to 250 kW (0.5 hp to 400 hp)

SINAMICS G120 standard inverters

Design

Power and DC link components which are optionally available depending on the Power Module used

The following line-side power components, DC link components and load-side power components are optionally available in the appropriate frames sizes for the Power Modules:

	Frame size						
	FSA	FSB	FSC	FSD	FSE	FSF	FSGX
PM240 Power Module with integrated brake chopper							without integrated brake chopper
Available frame sizes	✓	✓	✓	✓	✓	✓	✓

Sine-wave filter	–	–	–	I	–	I	–

U = Base component

S = Lateral mounting

I = Integrated

– = Not possible

F = Power Modules available with and without integrated class A filter

¹⁾ A line reactor is not required and must not be used in conjunction with a PM250 or PM260 Power Module.

²⁾ Line-commutated energy recovery is possible in conjunction with a PM250 or PM260 Power Module. A braking resistor cannot be connected and is not necessary.

³⁾ PM240 FSF Power Modules, from 110 kW (150 hp) and higher and FSGX are only available without an integrated class A filter. An optional class A line filter for side mounting is available instead.

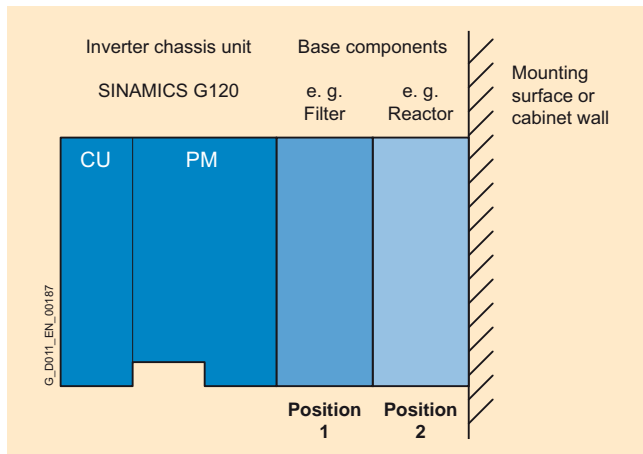

SINAMICS G120

Standard inverters 0.37 kW to 250 kW (0.5 hp to 400 hp)

SINAMICS G120 standard inverters

Design

General design information

Frequency inverters comprising a Power Module (PM) and a Control Unit (CU) and two base components at position 1 and position 2 (side view)

- A maximum of two base components plus inverter are possible.
- The line filter has to be mounted directly below the frequency inverter (position 1).
- With lateral mounting, the line-side components have to be mounted on the left side of the frequency inverter and the load-side components on the right side.
- Braking resistors have to be mounted directly on the control cabinet wall due to heating issues.

Recommended installation combinations of the inverter and optional power and DC link components

Power Modules Frame size	Base		Lateral mounting	
	Position 1	Position 2	left of the inverter (for line-side power components)	right of the inverter (for load-side power components and DC link components)
FSA and FSB	Line filter	Line reactor	–	Output reactor or sine-wave filter and/or braking resistor

Design**Supplementary system components**

The following supplementary system components are available for the SINAMICS G120 standard inverters:

Intelligent Operator Panel IOP

The IOP supports both entry-level personnel and drive experts. Thanks to the large plain text display, the menu prompting and the Application Wizards, it is easy to commission, diagnose and locally control standard drives.

Operator Panel BOP (not for CU230P-2 Control Units)

The Basic Operator Panel BOP can be plugged onto the Control Unit and can be used to commission drives, monitor drives in operation and input individual parameter settings. The BOP also provides a function to quickly copy parameters.

MMC memory card (not for CU240E Control Units)

The parameter settings for an inverter can be stored on the MMC memory card. When service is required, e.g. after the inverter has been replaced and the data have been downloaded from the memory card the drive system is immediately ready for use again. The associated slot is located on the top of the Control Unit.

CM240NE chemical industry module

Inverters for 400 V / 500 V and 690 V are required in the chemical industry that meet the special demands and requirements of this industry sector. The essential requirements and demands of the chemical industry are fulfilled using the SINAMICS G120 series of inverters supplemented by the CM240NE chemical industry module (with ATEX-certified PTC evaluation and a NAMUR terminal strip).

PC Inverter Connection Kit

For controlling and commissioning an inverter directly from a PC if the appropriate software (STARTER commissioning tool) has been installed.

The STARTER commissioning tool on DVD is included in the PC Inverter Connection Kit.

Brake Relay

The Brake Relay allows the Power Module to be connected to an electromechanical motor brake, thereby allowing the motor brake to be driven directly by the Control Unit.

Safe Brake Relay

The Safe Brake Relay allows the Power Module to be connected to an electromechanical motor brake, allowing the brake to be directly and safely controlled from the Control Unit in accordance with EN 954-1 Category 3 and IEC 61508 SIL 2.

Adapter for mounting on DIN rails

The adapter for mounting on DIN rails can be used to mount inverters of the sizes FSA and FSB on DIN mounting rails (2 units with a center-to-center distance of 100 mm).

Shield Connection Kit

The Shield Connection Kit makes it easier to connect the shields of supply and control cables, offers mechanical strain relief and thus ensures optimum EMC performance.

Shield Connection Kit for CU240S and CU230P-2

The Shield Connection Kit offers optimum shield connection and strain relief for all signal and communication cables. It includes a matching shield bonding plate and all of the necessary connecting and retaining elements for mounting.

Spare partsSpare Parts Kit for CU240

The kit includes a replacement cover for the terminals, a suitable shield bar for the CU240E Control Unit including screws, replacement connector for the CU240S Control Unit, protective element of the MMC card slot and screws to attach the shield bonding plate of the CU240S Control Unit.

Terminal Cover Kit

The kit includes a replacement cover for the terminals. The kit can be ordered for PM240 Power Modules, frame sizes FSD, FSE and FSF, as well as for the PM260, frame size FSF.

PM260 replacement connector

This spare part includes a connector for the input and output sides for the PM260 Power Module, frame size FSD.

SINAMICS G120 PM240 FSGX replacement door

A complete replacement door can be ordered for the PM240 Power Module, frame size FSGX.

Replacement fan

The Power Module fans are designed for extra long service life. Replacement fans can be ordered for special applications.

Configuration

The following electronic configuring and engineering tools are available for the SINAMICS G120 standard inverters:

Selection guide, SD Configurator

More than 100000 products with approximately 5 million possible product versions from the area of drive technology are listed in the interactive Catalog CA 01 – the Offline Mall from Siemens IA&DT. In order to make it easier to select the optimum motor and/or inverter from the wide range of Standard Drives, the SD Configurator was developed, which is integrated as "Selection guide" in this catalog on the DVD together with the selection and engineering tools.

Online SD Configurator

In addition, the SD Configurator can be used in the Internet without requiring any installation. The SD Configurator can be found in the Siemens Mall under the following address:

<http://www.siemens.com/dt-configurator>

SIZER configuration tool

The SIZER PC tool makes it easy to configure the SINAMICS and MICROMASTER 4 drive family. It provides support when selecting the hardware and firmware components necessary to implement a drive task. SIZER supports the configuration of the complete drive system, from simple single-motor drives up to complex multi-axis applications.

STARTER commissioning tool

The STARTER commissioning tool is used to commission, optimize and diagnose drives in a menu-prompted fashion. In addition to SINAMICS drives, STARTER is also suitable for MICROMASTER 4 units and the frequency converters for the distributed I/O SIMATIC ET 200S FC and SIMATIC ET 200pro FC.

Drive ES engineering system

Drive ES is the engineering system used to integrate the communication, configuration and data management functions of Siemens drive technology into the SIMATIC automation world easily, efficiently and cost-effectively. The STEP 7 Manager user interface forms the basis. Various software packages are available for SINAMICS:

Drive ES Basic, Drive ES SIMATIC and Drive ES PCS 7.

Technical specifications

Compliance with standards

CE mark

The SINAMICS G120 inverters meet the requirements of the Low-Voltage Directive 73/23/EEC.

Low-Voltage Directive

The inverters comply with the following standards listed in the official journal of the EU:

- EN 60204
Safety of Machinery, electrical equipment of machines
- EN 61800-5-1
Electrical power drive systems with variable speed – Part 5-1: Requirements regarding safety – electrical, thermal, and energy requirements

UL listing

Inverter devices in UL category NMMS certified to UL and cUL, in compliance with UL508C. UL list numbers E121068 and E192450.

For use in environments with pollution degree 2.

Also see the Internet under <http://www.ul.com>

Machinery Directive

The inverters are suitable for installation in machines. Compliance with the Machinery Directive 98/37/EC requires a separate certificate of conformity. This must be provided by the plant construction company or the organization marketing the machine.

EMC Directive

- EN 61800-3
Variable-speed electric drives
Part 3: EMC product standard including specific test methods

The EMC product standard EN 61800-3 has been valid for electric drive systems since 07/01/2005. The transition period for the predecessor standard EN 61800-3/A11 from February 2001 ended on October 1, 2007. The following information applies to SINAMICS G120 frequency inverters from Siemens:

- The EMC product standard EN 61800-3 does not apply directly to a frequency inverter but to a PDS (Power Drive System), which comprises the complete circuitry, motor and cables in addition to the inverter.
- Frequency inverters are normally only supplied to experts for installation in machines or systems. A frequency inverter must, therefore, only be considered as a component which, on its own, is not subject to the EMC product standard EN 61800-3. The inverter's operating manual, however, specifies the conditions regarding compliance with the product standard if the frequency inverter is expanded to become a PDS. For a PDS, the EMC Directive in the EU is complied with by observing the product standard EN 61800-3 for variable-speed electric drive systems. The frequency inverters on their own do not generally require identification according to the EMC Directive.
- In the Standard EN 61800-3 from July 2005, a distinction is no longer made between "general availability" and "restricted availability". Instead, different categories C1 to C4 have been defined in accordance with the environment of the PDS at the operating location:

- **Category C1:** Drive systems for rated voltages < 1000 V for use in the first environment
- **Category C2:** Stationary drive systems not connected by means of a plug connector for rated voltages < 1000 V. When used in the first environment, the system must be installed and commissioned by personnel familiar with EMC requirements. A warning note is required.
- **Category C3:** Drive systems for rated voltages < 1000 V for exclusive use in the second environment. A warning note is required.
- **Category C4:** Drive systems for rated voltages \geq 1000 V or for rated currents \geq 400 A or for use in complex systems in the second environment. An EMC plan must be generated.
- The EMC product standard EN 61800-3 also defines limit values for conducted interference and radiated interference for the so-called "second environment" (= industrial power supply systems that do not supply households). These limit values are below the limit values of filter class A to EN 55011. Unfiltered inverters can be used in industrial environments as long as they are part of a system that contains line filters on the higher-level infeed side.
- With SINAMICS G120, Power Drive Systems (PDS) that fulfill the EMC product standard EN 61800-3 can be configured when observing the installation instructions in the product documentation.
- A differentiation must be made between the product standards for electrical drive systems (PDS) of the range of standards EN 61800 (of which Part 3 covers EMC topics) and the product standards for the devices/systems/machines, etc. This will probably not result in any changes in the practical use of frequency inverters. Since frequency inverters are always part of a PDS and these are part of a machine, the machine manufacturer must observe various standards depending on their type and environment (e.g. EN 61000-3-2 for line harmonics and EN 55011 for radio interference). The product standard for PDS on its own is, therefore, either insufficient or irrelevant.
- With respect to the compliance with limits for line supply harmonics, the EMC product standard EN 61800-3 for PDS refers to compliance with the EN 61000-3-2 and EN 61000-3-12 standards.
- Regardless of the configuration with SINAMICS G120 and its components, the machine construction company (OEM) can also apply other measures to ensure that the machine complies with the EU EMC Directive. The EU EMC Directive is generally fulfilled when the relevant EMC product standards are observed. If they are not available, the generic standards (e.g. DIN EN 61000-x-x) can be used instead. It is important that the conducted and emitted interference at the line connection point and outside the machine remain below the relevant limit values. Any suitable technical measures can be applied to ensure this.

SEMI F47

SEMI F47 is an industry standard relating to the immunity to voltage dips. This includes the requirement that industrial equipment must be able to tolerate defined dips or drops of the line supply voltage. As a result, industrial equipment that fulfills this standard is more reliable and productive. In the SINAMICS G120 product family, the PM240 and PM250 Power Modules fulfill the latest SEMI F47-0706 standard. In the case of a voltage dip, defined in accordance with SEMI F47-0706, these drives either continue to supply a defined output current, or using an automatic restart function, continue to operate as expected.

SINAMICS G120

Standard inverters 0.37 kW to 250 kW (0.5 hp to 400 hp)

CU230 Control Units

Overview

Example: CU230P-2 HVAC Control Unit with Intelligent Operator Panel IOP on the PM240 Power Module, frame size FSC

The CU230P-2 Control Units are especially suitable for drives with integrated technological functions for pump, fan and compressor applications. The I/O interface, the fieldbus interfaces and the additional software functions optimally support these applications. The integration of technological functions is a significant differentiating feature to the other Control Units of the SINAMICS G120 drive family.

Standard							
RS485/USS; Modbus RTU	6	3	4	2	CU230P-2 HVAC	new	6SL3243-0BA30-1HA0
PROFIBUS DP	6	3	4	2	CU230P-2 DP	new	6SL3243-0BA30-1PA0
CANopen	6	3	4	2	CU230P-2 CAN	new	6SL3243-0BA30-1CA0

Function

Closed-loop control

- Linear and square torque characteristics for fluid flow and positive displacement machines
- ECO mode for additional energy saving
- Vector control without encoder for sophisticated control tasks

Connections

- Two analog inputs (current/voltage can be selected) to directly connect pressure/level sensors
- Two additional analog inputs to connect NI1000/PT1000 temperature sensors
- Direct control of valves and flaps using two 230 V relays

Interfaces

- PROFIBUS, USS, CANopen and Modbus RTU communication

Software functions

- Automatic restart function after power failure
- Flying restart
- Kinetic buffering ($V_{dc \min}$ control)
- PID controller for temperature, pressure, air quality, level
- Energy saving using the "hibernation mode"
- Load check function to monitor belts and flow
- Real time clock with three time generators

IOP wizards for special applications such as e.g.

- Pumps: Positive displacement (constant load torque) and centrifugal pumps (square load torque) with and without PID controller
- Fans: Radial and axial fans (square load torque) with and without PID controller
- Compressors: Positive displacement (constant load torque) and fluid flow machines (square load torque) with and without PID controller

CU240 Control Units

Overview

Example of CU240S DP-F Control Unit

The Control Unit performs closed-loop control functions for the inverter. In addition to the closed-loop control, it has additional functions that can be adapted to the particular application through parameterization. Several Control Units are available in different versions:

- CU240E
- CU240S
- CU240S DP
- CU240S DP-F
- CU240S PN
- CU240S PN-F

Safety Integrated functions

The following Safety Integrated functions are integrated in the CU240S DP-F and CU240S PN-F Control Units and, with the exception of the "Safe Brake Control", can be implemented without external circuit elements:

The SINAMICS G120 fail-safe frequency inverter provides four safety functions, certified in accordance with EN 954-1, Category 3 and IEC 61508 SIL 2:

- Safe Torque Off (STO) to protect against active movement of the drive
- Safe Stop 1 (SS1) for continuous monitoring of a safe braking ramp
- Safely Limited Speed (SLS) for protection against dangerous movements when a speed limit is exceeded
- Safe Brake Control (SBC) for controlling motor brakes that are active in the de-energized state, e.g. motor holding brakes

The functions "Safe Stop 1" and "Safely Limited Speed" can both be implemented without having to use a motor sensor or encoder; the implementation cost is minimal. Existing systems in particular can be simply updated with safety technology without the need to change the motor or mechanical system.

The safety functions "Safely Limited Speed" and "Safe Stop 1" are not certified for pull-through loads as in the case of lifting gear and winders.

Safety functions have been extended with firmware V3.2.

Additional information is provided in the part Highlights, section Safety Integrated.

SINAMICS G120

Standard inverters 0.37 kW to 250 kW (0.5 hp to 400 hp)

PM240 Power Modules –
0.37 kW to 250 kW (0.5 hp to 400 hp)

Overview

Example: SINAMICS G120, frame sizes FSA to FSF

Example: SINAMICS G120, frame size FSGX

PM240 Power Modules, frame sizes FSA to FSF have an integrated brake chopper to which an external braking resistor can be connected via terminals DCP/R1 and R2 (see DC link components).

PM240 Power Modules, frame size FSGX do not have an integrated brake chopper. For these devices, there is an optional pluggable braking module to connect a braking resistor.

The PM240 Power Module can be used to couple the DC links of up to 10 Power Modules. This functionality is used for applications such as safe power-down after power failure or kinetic buffering (the DC link is supplied in the generator mode with the kinetic energy of the load so that the DC link voltage can be maintained).

The PM240 Power Module is also designed for safety-oriented applications. In conjunction with a Fail-safe Control Unit, the drive can be turned into a Safety Integrated Drive (see Control Units).

The permissible cable lengths between inverter and motor are limited. Longer cables can be used if output reactors are connected (see load-side power components).

Line reactors are available to minimize line harmonics (see line-side components).

Frame size FSA of the PM240 Power Module is available only without integrated line filter to class A. A base filter is therefore available so that class A can be achieved. A class B base filter is also available so that class B can be achieved (see line-side power components).

Frame sizes FSB and FSC of the PM240 Power Module are available both with and without integrated class A line filter. For compliance with class B, PM240 Power Modules with integrated class A line filter must be fitted additionally with a class B base filter (see line-side components).

Power Modules with integrated class A line filter are suitable for connection to TN supply systems. Power Modules without integrated line filter can be connected to grounded (TN, TT) and non-grounded (IT) supply systems.

SINAMICS G120

Standard inverters 0.37 kW to 250 kW (0.5 hp to 400 hp)

PM240 Power Modules –
0.37 kW to 250 kW (0.5 hp to 400 hp)

Selection and ordering data

To ensure that a suitable Power Module is selected, the following currents should be used for applications:

- **rated output current for applications with light overload (LO)**
- **base load current for applications with high overload (HO)**

With reference to the rated output current, the modules support at least 2-pole to 6-pole low-voltage motors, e.g. the new 1LE1 motor series (please refer to the Appendix for further information). The rated power is merely a guide value. For a description of the overload performance, please refer to the general technical specifications of the Power Modules.

¹⁾ Rated power based on the rated output current I_{rated} . The rated output current I_{rated} is based on the duty cycle for light overload (LO).

²⁾ The rated output current I_{rated} is based on the duty cycle for light overload (LO). These current values are valid for 400 V and are stamped on the rating plate of the Power Module.

³⁾ The base load current I_H is based on the duty cycle for high overload (HO).

SINAMICS G120

Standard inverters 0.37 kW to 250 kW (0.5 hp to 400 hp)

PM240 Power Modules – 0.37 kW to 250 kW (0.5 hp to 400 hp)

Integration

PM240 Power Modules communicate with the Control Unit via the PM-IF interface.

PM240 Power Modules have the following interfaces as standard:

- PM-IF interface to connect the PM240 Power Module to the Control Unit. The PM240 Power Module also supplies power to the Control Unit using an integrated power supply
- Terminals DCP/R1 and R2 for connection of an external braking resistor, valid up to frame size FSF. For frame size FSGX, an external plug-in braking unit (Braking Module) is required to connect a braking resistor
- Motor connection using screw terminals or screw studs
- Control for the Brake Relay or the Safe Brake Relay for controlling a motor brake
- 2 PE/protective conductor connections

PM240 Power Module connection diagram with or without integrated class A line filter

U = Base component

S = Lateral mounting

I = Integrated

– = Not possible

F = Power Modules available with and without integrated class A filter

¹⁾ PM240 FSF Power Modules from 110 kW (150 hp) and higher and FSGX are only available without an integrated class A filter. An optional class A line filter for side mounting is available instead.

SINAMICS G120

Standard inverters 0.37 kW to 250 kW (0.5 hp to 400 hp)

PM240 Power Modules – 0.37 kW to 250 kW (0.5 hp to 400 hp)

Integration

Many system components for PM240 Power Modules are designed as base components, that is, the component is mounted on the baseplate and the PM240 Power Module above it in a space-saving design. Up to two base components can be mounted above one another.

The following diagram shows the basic layout of a PM240 Power Module with line reactor as base component. On the line side, the line-side reactors have terminals and on the Power Module side, they have a pre-fabricated cable. For frame sizes FSA to FSC, when installed, the line terminals are at the top, for frame sizes FSD to FSE they are at the bottom.

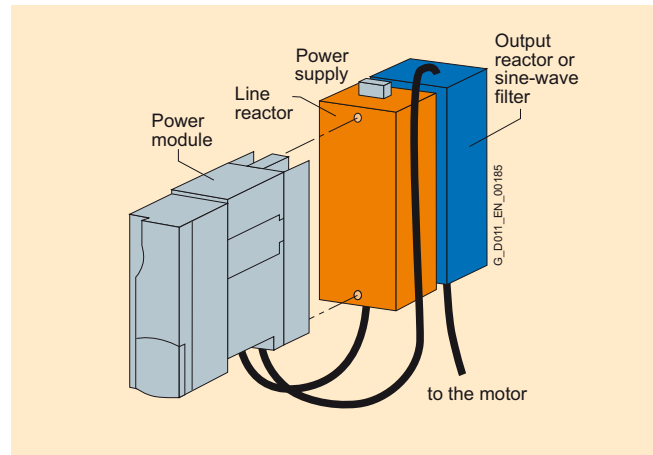

Basic layout of a PM240 Power Module with line reactor as base component

If a class A line filter is installed in addition to the line reactor on frame size FSA, the components must be arranged as shown in the diagram below. In this case, the line connection is from below.

Power Modules, from frame size FSB and higher are available with integrated class A line filters (an external class A line filter is not required in this case).

PM240 Power Module frame size FSA with line reactor and class A line filter

PM240 Power Module frame size FSA with line reactor and output reactor or sine-wave filter

For configurations involving more than two base-type system components, e.g. line filter + line reactor + output reactor, individual components must be mounted to the side of the Power Modules. In this case, the line reactor and line filter must be installed under the Power Module and the output reactor to the righthand side.

PM240 Power Module frame size FSA with line reactor, line filter and output reactor or sine-wave filter

Standard inverters 0.37 kW to 250 kW (0.5 hp to 400 hp)

PM240 Power Modules –
0.37 kW to 250 kW (0.5 hp to 400 hp)**Integration**

Maximum permissible cable lengths from the motor to the inverter when using output reactors or sine-wave filters depending on the voltage range

The following load-side power components are optionally available in the appropriate frame sizes and result in the following maximum cable lengths:

	Maximum permissible motor cable lengths (shielded/unshielded) in m						
	Frame sizes

Derating data

The following inverter output currents can still be implemented for long motor cables without output reactor and sine-wave filter.

Derating for PM240 Power Modules, frame sizes FSA to FSF for shielded motor cables. From frame size FSD and higher, only the particular main Power Module types were tested. The values also apply to the other Power Modules of the particular frame size.

Rated power (at I_H)		Frame size	Base load current I_H	Rated current I_{rated}	Motor connection cross-section	Current derating of the output current as a % of the base load current for the cable lengths (MOTION-CONNECT)

PM240 Power Modules – 0.37 kW to 250 kW (0.5 hp to 400 hp)

Technical specifications

General technical specifications

PM240 Power Modules	
System operating voltage	380 ... 480 V 3 AC ±10 %
Line supply requirements Line short circuit voltage u_K	at $u_K > 1$ %, a line reactor is recommended
Input frequency	47 ... 63 Hz
Output frequency • Control type V/f • Control type Vector	0 ... 650 Hz 0 ... 200 Hz
Pulse frequency	to 75 kW HO: 4 kHz from 90 kW HO: 2 kHz for higher pulse frequencies up to 16 kHz see the derating data
Power factor	0.7 ... 0.85
Inverter efficiency	95 ... 97 %
Modulation depth	93 %
Overload capability • High overload (HO) - 0.37 ... 75 kW - 90 ... 200 kW • Light overload (LO) - 0.37 ... 250 kW	1.5 × rated output current (i.e. 150 % overload) for 57 s with a cycle time of 300 s 2 × rated output current (i.e. 200 % overload) for 3 s with a cycle time of 300 s 1.36 × rated output current (i.e. 136 % overload) for 57 s with a cycle time of 300 s 1.6 × rated output current (i.e. 160 % overload) for 3 s with a cycle time of 300 s 1.1 × rated output current (i.e. 110 % overload) for 57 s with a cycle time of 300 s 1.5 × rated output current (i.e. 150 % overload) for 3 s with a cycle time of 300 s
Electromagnetic compatibility	Optional class A or B line filter acc. to EN 55011 is available
Possible braking methods	• DC braking • Compound braking • Dynamic braking with integrated brake chopper (optional for frame size FSGX)
Degree of protection	IP20
Operating temperature • High overload (HO) - Frame sizes FSD to FSF - Frame size FSGX • Light overload (LO)	0 ... 50 °C (32 ... 122 °F) without derating, > 50 ... 60 °C see derating characteristics 0 ... 40 °C (32 ... 104 °F) without derating, > 40 ... 55 °C see derating characteristics 0 ... 40 °C (32 ... 104 °F) without derating, > 40 ... 60 °C (> 40 ... 55 °C for frame size FSGX) see derating characteristics
Storage temperature	-40 ... +70 °C (-40 ... +158 °F)
Relative humidity	< 95 % RH, condensation not permissible
Cooling	Internal air cooling, power units with increased air cooling using integrated fans
Installation altitude	up to 1000 m above sea level without power reduction, > 1000 m see derating characteristics
Standard SCCR (Short Circuit Current Rating)¹⁾	FSA, FSB, FSC: 10 kA FSD, FSE, FSF, FSGX: 42 kA
Protection functions	• Undervoltage • Overvoltage • Overcontrol/overload • Ground fault • Short circuit • Stall protection • Motor blocking protection • Motor overtemperature • Inverter overtemperature • Parameter locking
Standards conformance	UL, cUL, CE, c-tick, SEMI F47
CE mark	According to Low-Voltage Directive 73/23/EEC and Machinery Directive 98/37/EC

¹⁾ Applies to industrial control cabinet installations to NEC Article 409/UL 508A. For further information, visit us on the Internet at: <http://support.automation.siemens.com/WW/view/en/23995621>

PM250 Power Modules –
7.5 kW to 75 kW (10 hp to 100 hp)

Overview

Example: PM250 Power Modules frame sizes FSC to FSF

The PM250 Power Module features an absolutely unique technology – Efficient Infeed Technology. This feature provides the ability to feed energy back into the supply system in the generator mode (electronic braking) so that the energy is not wasted in a braking resistor. This saves space in the control cabinet. The time-consuming process of dimensioning the braking resistor and the expense of the extra wiring are eliminated. Furthermore, heat losses in the control cabinet are reduced.

The innovative circuit design used in Efficient Infeed Technology reduces the line harmonics. There is no need to use an optional line reactor at the supply infeed. This saves space and costs for engineering and procurement.

The PM250 Power Module is also suitable for use in safety-oriented applications. In conjunction with a Fail-safe Control Unit, the drive can be turned into a Safety Integrated Drive (see Control Units).

The permissible cable lengths between inverter and motor are limited. Longer cables can be used if output reactors are connected (see load-side power components).

Frame sizes FSD to FSF of the PM250 Power Modules are available both with as well as without integrated class A line filter.

For frame size FSC of PM250 Power Module with an integrated class A line filter, an additional class B base filter is available for achieving class B (see line-side power components).

The PM250 Power Modules with integrated class A line filter are suitable for connection to TN supply systems. Power Modules without integrated line filter can be connected to grounded (TN, TT) and non-grounded (IT) supply systems.

Overview of how customers benefit from Efficient Infeed Technology

For more detailed information, please refer to the part Highlights, in section Efficient Infeed Technology.

		Standard Technology	Efficient Infeed Technology
Line reactor		Required	Not required (+)
Braking resistor		Required	Not required (+)
Configuration overhead		Standard	Low (+)
Generated harmonics		Standard	Minimal (+)
Heat generated when braking		Yes	No (+)
Power infeed		Standard	Approx. 22% less (+)
Power consumption		Standard	Approx. 22% less (+)
Energy efficiency		Standard	Good (+)
Reactive power compensation		No	Yes (+)
Installation outlay		Standard	Low (+)

PM250 Power Modules –
7.5 kW to 75 kW (10 hp to 100 hp)

Selection and ordering data

To ensure that a suitable Power Module is selected, the following currents should be used for applications:

- **rated output current for applications with light overload (LO)**
- **base load current for applications with high overload (HO)**

With reference to the rated output current, the modules support at least 2-pole to 6-pole low-voltage motors, e.g. the new 1LE1 motor series (please refer to the Appendix for further information). The rated power is merely a guide value. For a description of the overload performance, please refer to the general technical specifications of the Power Modules.

¹⁾ Rated power based on the rated output current I_{rated} . The rated output current I_{rated} is based on the duty cycle for light overload (LO).

²⁾ The rated output current I_{rated} is based on the duty cycle for light overload (LO). These current values are valid for 400 V and are stamped on the rating plate of the Power Module.

³⁾ The base load current I_H is based on the duty cycle for high overload (HO).

SINAMICS G120

Standard inverters 0.37 kW to 250 kW (0.5 hp to 400 hp)

PM250 Power Modules – 7.5 kW to 75 kW (10 hp to 100 hp)

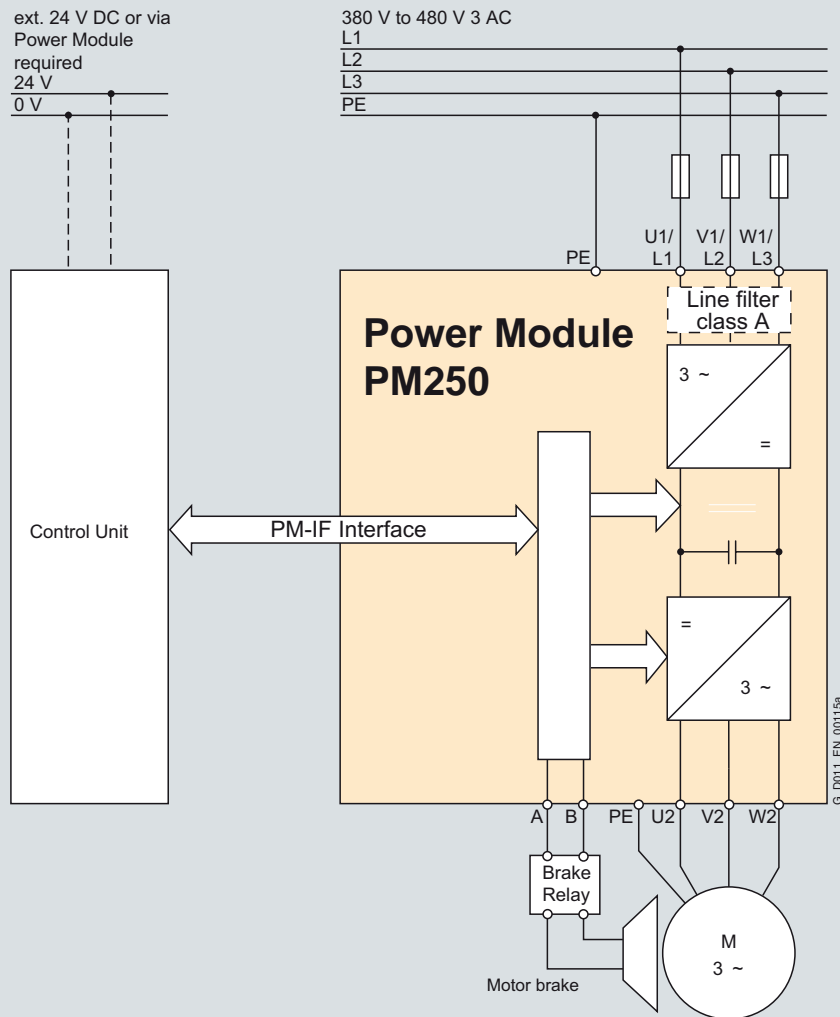

Integration

PM250 Power Modules communicate with the Control Unit via the PM-IF interface.

PM250 Power Modules feature the following interfaces as standard:

- PM-IF interface to connect the PM250 Power Module to the Control Unit. The PM250 Power Module also supplies power to the Control Unit using an integrated power supply

- Motor connected using screw terminals or screw studs
- Control for the Brake Relay or the Safe Brake Relay for controlling a motor brake
- 2 PE/protective conductor connections

PM250 Power Module connection diagram with or without integrated class A line filter

Integration

Power and DC link components which are optionally available depending on the Power Module used

The following line-side power components, DC link components and load-side power components are optionally available in the appropriate frame sizes for the Power Modules:

	Frame size						
	FSA	FSB	FSC	FSD	FSE	FSF	FSGX
PM250 Power Module with line-commutated energy recovery							
Available frame sizes	–	–	✓	✓	✓	✓	–
Line-side power components							
Line filter, class A	–	–	I	F	F	F	–
Line filter, class B	–	–	U	–	–	–	–
Line reactor ¹⁾	–	–	– 1)	– 1)	– 1)	– 1)	–
DC link components							
Braking resistor ²⁾	–	–	– 2)	– 2)	– 2)	– 2)	–
Load-side power components							
Output reactor	–	–	U	S	S	S	–
Sine-wave filter	–	–	U	S	S	S	–

U = Base component

S = Lateral mounting

I = Integrated

– = Not possible

F = Power Modules available with and without integrated class A filter

Available as base components

Many system components for PM250 Power Modules are designed as base components, that is, the component is mounted on the baseplate and the PM250 Power Module above it in a space-saving design. Up to two base components can be mounted above one another.

The following diagram shows the basic layout of a PM250 Power Module with additional class B line filter as base component:

Basic layout of a PM250 Power Module with class B line filter as base component

The following example shows the structure for two base components:

Basic layout of a PM250 Power Module with class B line filter as base component and output reactor

¹⁾ A line reactor is not required and must not be used in conjunction with a PM250 or PM260 Power Module.

²⁾ Line-commutated energy recovery is possible in conjunction with a PM250 or PM260 Power Module. A braking resistor cannot be connected and is not necessary.

SINAMICS G120

Standard inverters 0.37 kW to 250 kW (0.5 hp to 400 hp)

PM250 Power Modules – 7.5 kW to 75 kW (10 hp to 100 hp)

Integration

Maximum permissible cable lengths from the motor to the inverter when using output reactors or sine-wave filters depending on the voltage range

The following load-side power components in the appropriate frame sizes are optionally available for the Power Modules and result in the following maximum cable lengths:

	Maximum permissible motor cable lengths (shielded/unshielded) in m

Technical specifications

General technical specifications

	PM250 Power Modules
System operating voltage	380 ... 480 V 3 AC ±10 %
Line supply requirements	≤ 1 %
Line short circuit voltage u_K	
Input frequency	47 ... 63 Hz
Output frequency	
• Control type V/f	0 ... 650 Hz
• Control type Vector	0 ... 200 Hz
Pulse frequency	4 kHz (standard), higher pulse frequencies up to 16 kHz, see the derating data
Power factor	0.9
Inverter efficiency	95 ... 97 %
Modulation depth	87 %
Overload capability	
• High overload (HO)	1.5 × rated output current (i.e. 150 % overload) for 57 s with a cycle time of 300 s 2 × rated output current (i.e. 200 % overload) for 3 s with a cycle time of 300 s
• Light overload (LO)	1.1 × rated output current (i.e. 110 % overload) for 57 s with a cycle time of 300 s 1.5 × rated output current (i.e. 150 % overload) for 3 s with a cycle time of 300 s
Electromagnetic compatibility	Optional class A or B line filter acc. to EN 55011 is available
Possible braking methods	Energy recovery in the generator mode
Degree of protection	IP20
Operating temperature	
• High overload (HO)	0 ... 50 °C (32 ... 122 °F) without derating, > 50 ... 60 °C see derating characteristics
• Light overload (LO)	0 ... 40 °C (32 ... 104 °F) without derating, > 40 ... 60 °C see derating characteristics
Storage temperature	–40 ... +70 °C (–40 ... +158 °F)
Relative humidity	< 95 % RH, condensation not permissible
Cooling	Internal air cooling, power units with increased air cooling using integrated fans
Installation altitude	up to 1000 m above sea level without power reduction, > 1000 m see derating characteristics
Standard SCCR (Short Circuit Current Rating) ¹⁾	FSC: 10 kA FSD, FSE, FSF: 42 kA
Protection functions	<ul style="list-style-type: none"> • Undervoltage • Overvoltage • Overcontrol/overload • Ground fault • Short circuit • Stall protection • Motor blocking protection • Motor overtemperature • Inverter overtemperature • Parameter locking
Standards conformance	UL, cUL, CE, c-tick
CE mark	According to Low-Voltage Directive 73/23/EEC and Machinery Directive 98/37/EC

¹⁾ Applies to industrial control cabinet installations to NEC Article 409/UL 508A. For further information, visit us on the Internet at: <http://support.automation.siemens.com/WW/view/en/23995621>

SINAMICS G120

Standard inverters 0.37 kW to 250 kW (0.5 hp to 400 hp)

PM250 Power Modules –
7.5 kW to 75 kW (10 hp to 100 hp)

Dimensional drawings

PM250 Power Module frame size FSC with integrated class A line filter

Mounted with 4 M5 studs, 4 M5 nuts, 4 M5 washers.

Ventilation clearance required at top and bottom: 125 mm (4.92 inches).

Ventilation clearance required at sides:

- Ambient temperature ≤ 40 °C: 0 mm (0 inches).
- Ambient temperature > 40 °C: 50 mm (1.97 inches).

When the Control Unit is plugged on, the mounting depth increases by 65 mm (2.56 inches).

Exception: for CU240E, mounting depth +31 mm (+1.22 inches).

All dimensions in mm (values in brackets are in inches).

SINAMICS G120

Standard inverters 0.37 kW to 250 kW (0.5 hp to 400 hp)

PM250 Power Modules –
7.5 kW to 75 kW (10 hp to 100 hp)

Dimensional drawings

PM250 Power Module frame size FSD without line filter

PM250 Power Module frame size FSD with integrated class A line filter

Mounted with 4 M8 studs, 4 M8 nuts, 4 M8 washers.

Ventilation clearance required at top and bottom: 300 mm (11.81 inches).

Ventilation clearance required at sides: 0 mm (0 inches).

When the Control Unit is plugged on, the mounting depth increases by 56 mm (2.2 inches).

Exception: for CU240E, mounting depth +22 mm (+0.87 inches).

All dimensions in mm (values in brackets are in inches).

SINAMICS G120

Standard inverters 0.37 kW to 250 kW (0.5 hp to 400 hp)

PM250 Power Modules –
7.5 kW to 75 kW (10 hp to 100 hp)

Dimensional drawings

PM250 Power Module frame size FSF without line filter

PM250 Power Module frame size FSF with integrated class A line filter

Mounted with 4 M8 studs, 4 M8 nuts, 4 M8 washers.

Ventilation clearance required at top and bottom: 350 mm
(13.78 inches).

Ventilation clearance required at sides: 0 mm (0 inches).

When the Control Unit is plugged on, the mounting depth increases by 56 mm (2.2 inches).

Exception: for CU240E, mounting depth +22 mm
(+0.87 inches).

All dimensions in mm (values in brackets are in inches).

SINAMICS G120

Standard inverters 0.37 kW to 250 kW (0.5 hp to 400 hp)

PM260 Power Modules –
11 kW to 55 kW (15 hp to 75 hp)

Overview

Example: PM260 FSD Power Module

The PM260 Power Module features an absolutely unique technology – Efficient Infeed Technology. This feature provides the ability to feed energy back into the supply system in the generator mode (electronic braking) so that the energy is not wasted in a braking resistor. This saves space in the control cabinet. The time-consuming process of dimensioning the braking resistor and the expense of the extra wiring are eliminated. Furthermore, heat losses in the control cabinet are reduced.

The innovative circuit design used in Efficient Infeed Technology reduces the line harmonics. There is no need to use an optional line reactor at the supply infeed. This saves space and costs for engineering and procurement.

The PM260 Power Modules are also characterized by a higher rated pulse frequency combined with a high efficiency and an integrated sine-wave filter. The integrated sine-wave filter ensures that the inverter output current is sinusoidal and supports cable lengths of up to 200 m shielded and 300 m unshielded. An output reactor is therefore not required. Furthermore, lower bearing currents and voltage stress are generated that reduces the overall stress on the motor.

The use of SiC free-wheeling diodes – an absolutely unique innovation – makes the PM260 Power Module extremely compact. It is also highly resistant to thermal loading and operates very quietly as a result of the high clock frequencies.

Standard motors can be used in conjunction with the PM260 Power Module. The winding system insulation strength does not have to be increased.

The PM260 Power Module is suitable for safety-oriented applications. In conjunction with a Fail-safe Control Unit, the drive can be turned into a Safety Integrated Drive (see Control Units).

The PM260 Power Modules with integrated class A line filter are suitable for connection to TN supply systems. Power Modules without integrated line filter can be connected to grounded (TN, TT) and non-grounded (IT) supply systems.

Overview of how customers benefit from Efficient Infeed Technology

For more detailed information, please refer to the part Highlights, in section Efficient Infeed Technology.

	Standard Technology	Efficient Infeed Technology
Line reactor 	Required	Not required +
Braking resistor 	Required	Not required +
Configuration overhead 	Standard	Low +
Generated harmonics 	Standard	Minimal +
Heat generated when braking 	Yes	No +
Power infeed 	Standard	Approx. 22% less +
Power consumption 	Standard	Approx. 22% less +
Energy efficiency 	Standard	Good +
Reactive power compensation 	No	Yes +
Installation outlay 	Standard	Low +

G_D011_EN_00182

Overview of how customers benefit from SiC free-wheeling diodes

- Low switching losses at high fundamental frequency
- High speeds possible
- Quiet operation thanks to pulse frequency = 16 kHz
- High thermal load capacity (small heatsinks)
- Very compact units
- Increased ruggedness
- High efficiency
- Low forward losses
- Power unit with regenerative feedback capability
- Integrated sine-wave filter, long unshielded cables can be used
- Can be used with motors without a special insulation
- Very low bearing currents, no bearing insulation required

SINAMICS G120

Standard inverters 0.37 kW to 250 kW (0.5 hp to 400 hp)

PM260 Power Modules –
11 kW to 55 kW (15 hp to 75 hp)

Selection and ordering data

To ensure that a suitable Power Module is selected, the following currents should be used for applications:

- **rated output current for applications with light overload (LO)**
- **base load current for applications with high overload (HO)**

With reference to the rated output current, the modules support at least 2-pole to 6-pole low-voltage motors, e.g. the new 1LE1 motor series (please refer to the Appendix for further information). The rated power is merely a guide value. For a description of the overload performance, please refer to the general technical specifications of the Power Modules.

¹⁾ Rated power based on the rated output current I_{rated} . The rated output current I_{rated} is based on the duty cycle for light overload (LO).

²⁾ The rated output current I_{rated} is based on the duty cycle for light overload (LO). These current values are valid for 690 V and are stamped on the rating plate of the Power Module.

³⁾ The base load current I_H is based on the duty cycle for high overload (HO).

SINAMICS G120

Standard inverters 0.37 kW to 250 kW (0.5 hp to 400 hp)

PM260 Power Modules – 11 kW to 55 kW (15 hp to 75 hp)

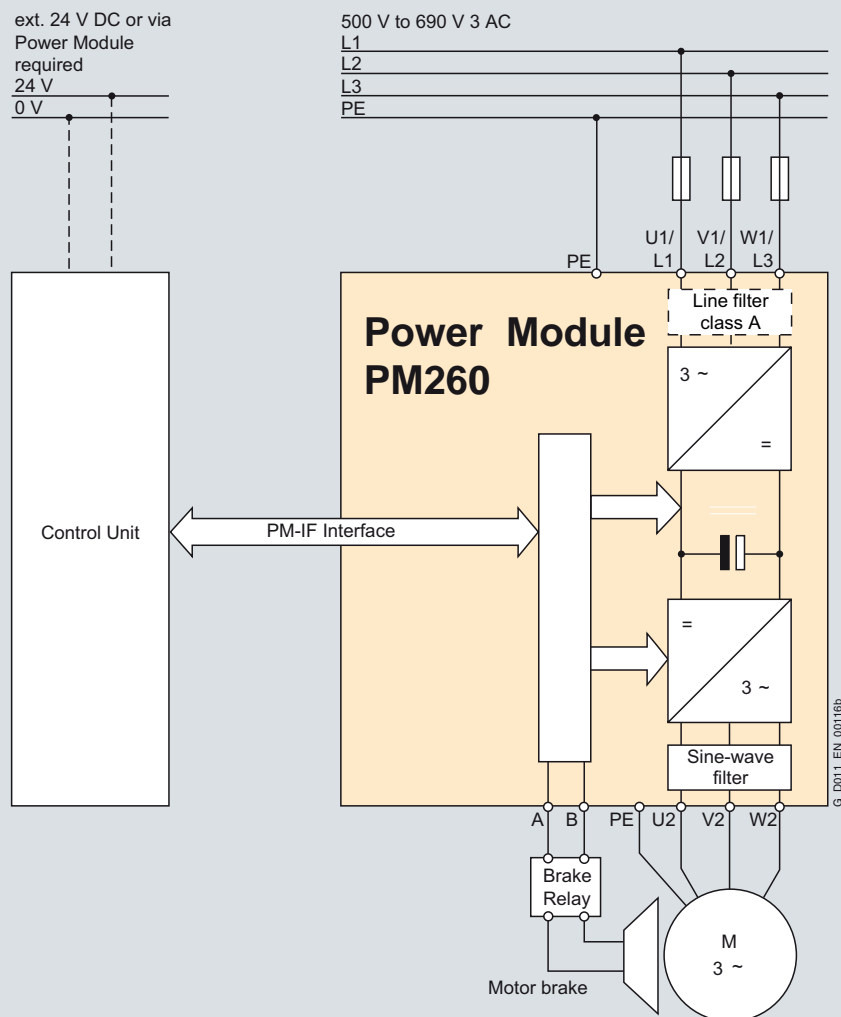

Integration

PM260 Power Modules communicate with the Control Unit via the PM-IF interface.

PM260 Power Modules feature the following interfaces as standard:

- PM-IF interface to connect the PM260 Power Module to the Control Unit. The PM260 Power Module also supplies power to the Control Unit using the integrated power supply

- Motor connected using screw terminals or screw studs
- Control for the Brake Relay or the Safe Brake Relay for controlling a motor brake
- 2 PE/protective conductor connections

PM260 Power Module connection diagram with or without integrated class A line filter

¹⁾ A line reactor is not required and must not be used in conjunction with a PM250 or PM260 Power Module.

²⁾ Line-commutated energy recovery is possible in conjunction with a PM250 or PM260 Power Module. A braking resistor cannot be connected and is not necessary.

SINAMICS G120

Standard inverters 0.37 kW to 250 kW (0.5 hp to 400 hp)

PM260 Power Modules –
11 kW to 55 kW (15 hp to 75 hp)

Technical specifications

General technical specifications

PM260 Power Modules	
System operating voltage	500 ... 690 V 3 AC $\pm 10\%$ For operation from 500 V -10% linearly reduced – see derating characteristics
Line supply requirements Line short circuit voltage u_K	$\leq 1\%$
Input frequency	47 ... 63 Hz
Output frequency	
• Control type V/f	0 ... 200 Hz
• Control type Vector	0 ... 200 Hz
Pulse frequency	16 kHz (standard)
Power factor	0.95
Inverter efficiency	95 ... 97 %
Modulation depth	87 %
Overload capability	
• High overload (HO)	1.5 \times rated output current (i.e. 150 % overload) for 57 s with a cycle time of 300 s 2 \times rated output current (i.e. 200 % overload) for 3 s with a cycle time of 300 s
• Light overload (LO)	1.1 \times rated output current (i.e. 110 % overload) for 57 s with a cycle time of 300 s 1.4 \times rated output current (i.e. 140 % overload) for 3 s with a cycle time of 300 s
Electromagnetic compatibility	Optional class A line filter according to EN 55011 is available
Possible braking methods	Energy recovery in the generator mode
Degree of protection	IP20
Operating temperature	
• High overload (HO)	0 ... 50 °C (32 ... 122 °F) without derating, > 50 ... 60 °C see derating characteristics
• Light overload (LO)	0 ... 40 °C (32 ... 104 °F) without derating, > 40 ... 60 °C see derating characteristics
Storage temperature	-40 ... +70 °C (-40 ... +158 °F)
Relative humidity	< 95 % RH, condensation not permissible
Cooling	Internal air cooling, power units with increased air cooling using integrated fans
Installation altitude	up to 1000 m above sea level without power reduction, > 1000 m see derating characteristics
Standard SCCR (Short Circuit Current Rating)¹⁾	42 kA
Protection functions	<ul style="list-style-type: none"> • Undervoltage • Overvoltage • Overcontrol/overload • Ground fault • Short circuit • Stall protection • Motor blocking protection • Motor overtemperature • Inverter overtemperature • Parameter locking
Standards conformance	CE
CE mark	According to Low-Voltage Directive 73/23/EEC and Machinery Directive 98/37/EC

¹⁾ Applies to industrial control cabinet installations to NEC Article 409/UL 508A. For further information, visit us on the Internet at: <http://support.automation.siemens.com/WW/view/en/23995621>

¹⁾ The rated output current I_{rated} and the base load current I_L are based on the duty cycle for light overload (LO).

²⁾ The base load current I_H is based on the duty cycle for high overload (HO).

³⁾ The input current depends on the motor load and is valid for a line impedance corresponding to $u_K = 1\%$. The rated input currents apply for a load at the rated power (based on I_{rated}) – these current values are specified on the rating plate.

⁴⁾ Shielded motor cables must be used in order to maintain the limit values for field-conducted disturbances according to EN 61800-3 Class C2.

PM260 Power Modules –
11 kW to 55 kW (15 hp to 75 hp)

Dimensional drawings

PM260 Power Module frame size FSD with and without integrated class A line filter

Mounted with 4 M6 studs, 4 M6 nuts, 4 M6 washers.

Ventilation clearance required at top and bottom: 300 mm (11.81 inches).

Ventilation clearance required at sides: 0 mm (0 inches).

When the Control Unit is plugged on, the mounting depth increases by 56 mm (2.2 inches).

Exception: for CU240E, mounting depth +22 mm (+0.87 inches).

All dimensions in mm (values in brackets are in inches).

PM260 Power Module frame size FSF with and without integrated line filter class A

Mounted with 4 M8 studs, 4 M8 nuts, 4 M8 washers.

Ventilation clearance required at top and bottom: 350 mm (13.78 inches).

Ventilation clearance required at sides: 0 mm (0 inches).

When the Control Unit is plugged on, the mounting depth increases by 56 mm (2.2 inches).

Exception: for CU240E, mounting depth +22 mm (+0.87 inches).

All dimensions in mm (values in brackets are in inches).

SINAMICS G120

Standard inverters 0.37 kW to 250 kW (0.5 hp to 400 hp)

Compact inverters
0.37 kW to 15 kW (0.5 hp to 20 hp)

Overview

Example: Compact inverters, SINAMICS G120 with PM240 Power Module frame size FSB, CU240E Control Unit and BOP

The entry into SINAMICS G120 with an already assembled compact inverter

Three components can be ordered, completely assembled, with one Order No.: The PM240 Power Module with integrated brake choppers, the CU240E Control Unit and the BOP operator panel.

The compact inverter is suitable for applications in which the advantages of a compact inverter prevail (only one Order No., simpler to order). In this case, the advantages of a consistently modular system no longer apply (lower stockkeeping, high degree of flexibility).

The individual components of the compact inverter still remain completely modular. After they have been received, they can be separated at any time.

Integration

Frame size FSA of the PM240 Power Module is available only without integrated class A line filter. A base filter is therefore available so that class A can be achieved. A class B base filter is also available so that class B can be achieved.

Frame sizes FSB and FSC of the PM240 Power Module are available both with and without integrated class A line filter. For compliance with class B, PM240 Power Modules with integrated class A line filter must be fitted additionally with a base filter to class B.

An external class A line filter is available for frame size FSGX of the PM240 Power Module.

Frame sizes FSD of the PM250 Power Module are available only with integrated class A line filter. For compliance with class B, PM250 Power Modules must be fitted additionally with a class B base filter.

No additional Class B line filters are available for the PM260 Power Module.

Overview

A line reactor reduces the system perturbations caused by harmonics. This particularly applies in the case of weak line supplies (line supply short-circuit power $u_K > 1\%$).

Example: Line reactors for Power Modules frame sizes FSA to FSE

Example: Line reactor for PM240 Power Modules frame size FSGX

Example: Power Module frame size FSB with base line reactor and shield bonding plate

Note: A line reactor must not be used in combination with a PM250 or PM260 Power Module.

Benefits

Only AC reactors are available as reactors for the inverter.

- Only an AC reactor provides protection for the input rectifier of the inverter.
- The capacitor lifetime of the inverter increases when using an AC reactor by a factor of 2 when compared to the lifetime when using a DC reactor.
- The harmonic behavior of AC reactors remain almost constant over the complete lifetime. Over time (months), the harmonic behavior of DC reactors changes.
- An AC reactor reduces possible dissymmetries between the current phases. In this case, a DC reactor would not be effective.

Integration

The line reactors for PM240 Power Modules, frame sizes FSA to FSE, are designed as base components. The line reactor is attached to the mounting surface and the Power Module is mounted directly on the line reactor in a space-saving fashion.

The cables to the Power Module are already connected at the line reactor.

The line reactor is connected to the line supply through terminals.

Line-side power components
Recommended line components

Overview

The following table lists recommendations for additional line-side components, such as fuses and circuit breakers (line-side components dimensioned in accordance with IEC standards). The specified circuit breakers are UL-certified.

3NA3 fuses are recommended for European countries. The 3NE1 fuses are UL-compliant (corresponds to RU). The values in the table take into account the overload capability of the inverter.

Additional information about the listed fuses and circuit breakers can be found in Catalogs LV 1 and LV 1 T.

DC link components
Braking resistors

Overview

Example: Braking resistors for Power Modules, frame sizes FSA and FSC

Example: Braking resistor for PM240 Power Modules frame size FSGX

Excess energy in the DC link is dissipated in the braking resistor. The braking resistors are intended for use with PM240 Power Modules which feature an integrated brake chopper, but cannot regenerate energy to the supply system. There is an optional plug-in Braking Module for frame size FSGX. For generator operation, e.g. the braking of a rotating mass with high moment of inertia, a braking resistor must be connected to convert the resulting energy into heat.

The braking resistors can be installed at the side of the PM240 Power Modules. The braking resistors for the FSA and FSB frame sizes are designed as base components. If the PM240 Power Modules, frame size FSA or FSB, are operated without line reactor, the braking resistors can also be installed under the Power Modules.

The braking resistors for the Power Modules, frame sizes FSC to FSGX, should be placed outside the control cabinet or outside the switchgear room so that the heat is dissipated away from the Power Modules. The level of air conditioning required is therefore reduced.

Every braking resistor has a temperature switch (UL-listed). The temperature switch can be evaluated to prevent consequential damage if the braking resistor overheats.

SINAMICS G120

Standard inverters 0.37 kW to 250 kW (0.5 hp to 400 hp)

DC link components Braking Modules

Overview

A Braking Module and the matching external braking resistor are required to bring drives to a controlled standstill in the event of a power failure (e.g. emergency retraction or EMERGENCY STOP Category 1) or limit the DC link voltage for brief periods of generator operation. The Braking Module includes the power electronics and the associated control circuit. During operation, the DC link energy is converted to heat loss in an external braking resistor. Braking Modules function autonomously.

The Braking Module is designed for installation in PM240 Power Modules, frame size FSGX and is cooled by the Power Module fan. The supply voltage for the electronics is taken from the DC link. The Braking Module is connected to the DC link using the busbar sets included in the scope of delivery.

The activation threshold of the Braking Module can be adjusted by means of a DIP switch. The braking power values specified in the technical specifications apply to the upper activation threshold.

Selection and ordering data

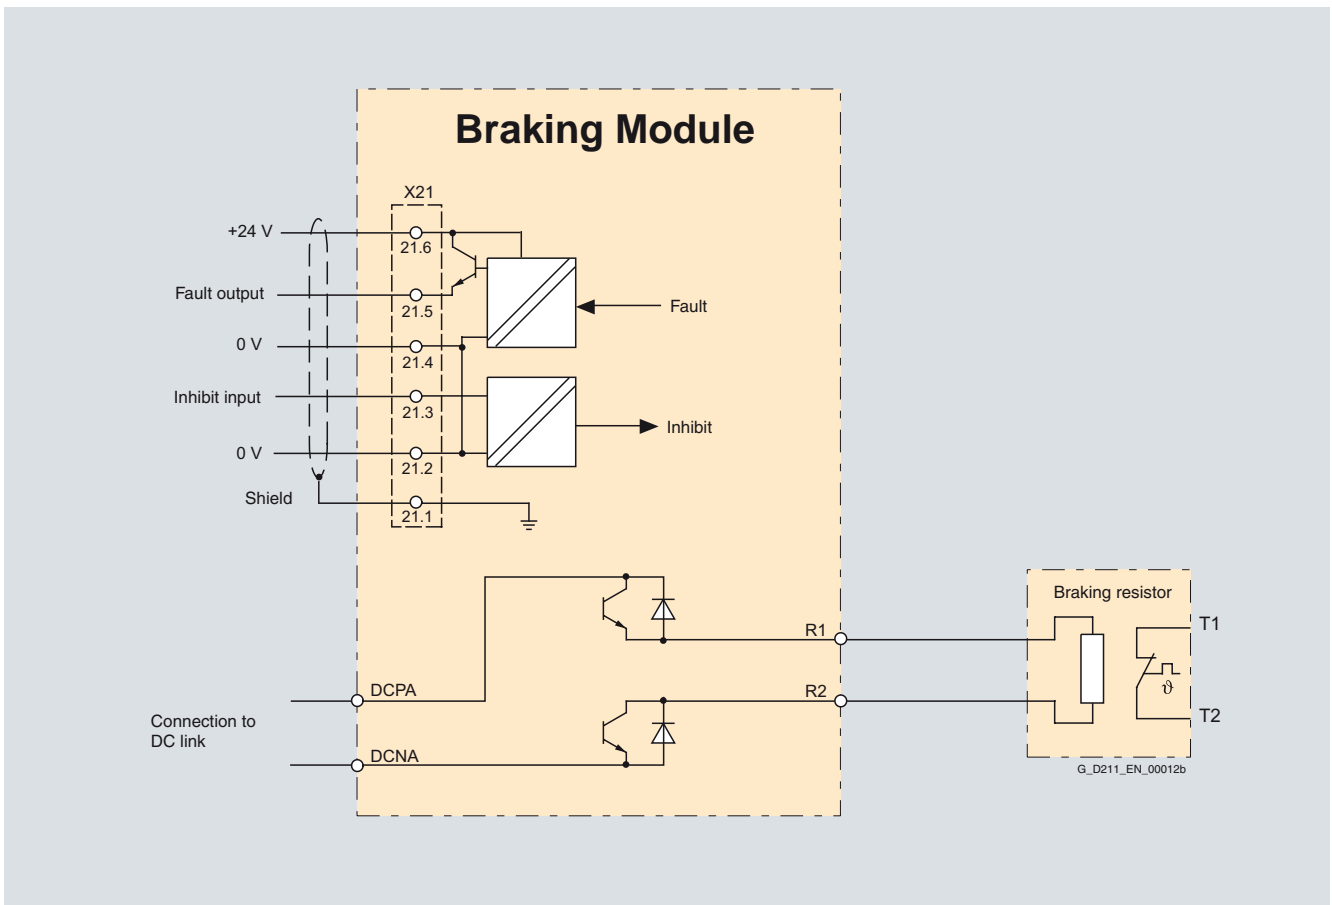

Description	Order No.
DC link voltage 510 ... 720 V DC	
Braking Module 50 kW/250 kW	new 6SL3300-1AE32-5AA0

Design

The Braking Module has the following interfaces as standard:

- 1 DC link connection
- 1 braking resistor connection
- 1 digital input (inhibit Braking Module/acknowledge fault)
- 1 digital output (Braking Module inhibited)
- 1 DIP switch for adjusting the activation threshold

Integration

Connection example of a Braking Module

• Max. conductor cross-section	50 mm ²
Weight, approx.	7.3 kg
Approvals	cURus (File No.: E192450)
Suitable for installation in a PM240 Power Module	Frame size FSGX

SINAMICS G120

Standard inverters 0.37 kW to 250 kW (0.5 hp to 400 hp)

Load-side power components Output reactors

Overview

Output reactors reduce the voltage stress on the motor windings. At the same time, the capacitive charging/discharging currents, which place an additional load on the power unit when long motor cables are used, are reduced.

Output reactors are only provided for the PM240 and PM250 Power Modules. An output reactor is not required for the PM260 Power Module due to its integrated sine-wave filter.

The maximum permissible output frequency is 150 Hz when an output reactor is used – the pulse frequency must not exceed 4 kHz.

The output reactor must be installed as close as possible to the Power Module.

Output reactors are approved for use only in conjunction with "Vector" and "V/f control" modes.

Example: Output reactors for Power Modules frame sizes FSA and FSB

Example: Output reactor for PM240 Power Modules frame size FSGX

Sine-wave filters

Overview

Example: Sine-wave filter for PM240 Power Modules frame size FSGX

A sine-wave filter limits the rate of rise of voltage and the capacitive charging/discharging currents that usually occur with inverter operation. An output reactor is not required. Sine-wave filters are only provided for the PM240 and PM250 Power Modules. PM260 Power Modules already have an integrated sine-wave filter and an additional sine-wave filter is not required.

The sine-wave filter at the inverter output supplies almost perfect sinusoidal voltages at the motor so that standard motors can be used without special cables. Standard cables can be used. The maximum permissible motor feeder length is 300 m. The maximum output frequency is 150 Hz at 380 V to 480 V.

When using sine-wave filters, the following should be observed:

- Operation with pulse frequencies from 4 kHz to 8 kHz (sine-wave filter from 160 kW, only for 4 kHz) permissible
- It must be ensured that the automatic pulse frequency reduction functions are also deactivated
- A derating of 5 % must be observed when selecting a suitable inverter
- The output frequency is limited to 150 Hz
- Operation and commissioning may only be performed with the motor connected as the sine-wave filter is not no-load proof

SINAMICS G120

Standard inverters 0.37 kW to 250 kW (0.5 hp to 400 hp)

Supplementary system components Intelligent Operator Panel IOP

Overview

Intelligent Operator Panel IOP

The Intelligent Operator Panel IOP is an extremely user-friendly and powerful Operator Panel for the SINAMICS G120, SINAMICS G120D standard drives and SIMATIC ET 200 frequency converters.

The IOP supports both entry-level personnel and drive experts. Thanks to the large plain text display, the menu prompting and the Application Wizards, it is easy to commission standard drives. A drive can be essentially commissioned without having to use a printed parameter list as the parameters are displayed in plain text and due to the explanatory help texts and the parameter filtering function.

Application Wizards interactively guide you when commissioning important applications such as conveyor technology, pumps, fans and compressors. There are quick commissioning wizards for general commissioning.

The drives are manually and simply controlled using directly assigned buttons and the navigation wheel. The IOP has a dedicated switchover button to switch over from the automatic to the manual mode.

The frequency inverter can be diagnosed in a user-friendly fashion using the plain text display of faults and alarms. Help texts can be obtained by pressing the INFO button.

Up to two process values can either be graphically or numerically visualized on the status screen/status display. Process values can also be displayed in technological units.

IOP supports series commissioning of identical drives. For this purpose, a parameter list can be copied from a frequency inverter into the IOP and when required, downloaded into other drive units of the same type.

The IOP includes the following language packages: English, French, German, Italian and Spanish.

The IOP can be installed in control cabinet doors using the optionally available door mounting kit.

Updating the IOP

The IOP can be updated and expanded using the integrated USB interface. Data to support future drive systems can be transferred from the PC to the IOP via drag & drop. Further, the USB interface allows user languages and wizards that become available in the future to be subsequently downloaded and the firmware to be updated for the IOP. The IOP is supplied with power via the USB interface during an update.

IOP Handheld

A handheld version of the IOP can be ordered for mobile use. In addition to the IOP, this includes a housing with rechargeable batteries, charging unit and RS232 interface cable. The charging unit is supplied with connector adapters for Europe, the US and UK. When the batteries are fully charged, the operating time is up to 8 hours.

A PC Inverter Connection Kit 6SL3255-0AA00-2AA1 is required to connect the IOP to the CU240S and CU240E Control Units.

To connect the IOP Handheld to SINAMICS G110D and SINAMICS G120D, the RS232 interface cable with optical interface is additionally required.

Benefits

- Simple commissioning of standard applications using wizards, it is not necessary to know the parameter structure
- Diagnostics using plain text display; can be used locally on-site without documentation
- Direct manual operation of the drive – you can toggle between the automatic and manual modes
- Status display with freely selectable units; display of real physical values
- Intuitive, navigation using a wheel – just like in everyday applications
- Graphic display for e.g. status values in bar-type diagrams such as e.g. pressure, flow
- Quickly and simply mounted in the door – mechanically and electrically
- Simple local commissioning on-site using the handheld version
- Commissioning without documentation using the integrated help function
- Series commissioning using the clone function (parameter set data is saved for fast replacement)
- User-defined parameter list with a reduced number of self-selected parameters (to generate your own commissioning screens)
- 5 integrated languages
- Simple update of languages, wizards and firmware updates via USB

Selection and ordering data

Designation	Order No.
Intelligent Operator Panel IOP	new 6SL3255-0AA00-4JA0
IOP Handheld	new 6SL3255-0AA00-4HA0
For use with SINAMICS G120, SINAMICS G110D, SINAMICS G120D, SIMATIC ET 200S FC or SIMATIC ET 200pro FC	
Included in the scope of delivery:	
<ul style="list-style-type: none"> • IOP • Handheld housing • Rechargeable batteries (4 × AA) • Charging unit (international) • RS232 connecting cable (3 m long, can only be used for SINAMICS G120 and SIMATIC ET 200S FC) • USB cable (1 m long) 	

Accessories

Designation	Order No.
IOP Door Mounting Kit	new 6SL3256-0AP00-0JA0
IP54 degree of protection for mounting the IOP in control cabinet doors with sheet steel thicknesses of 1 ... 3 mm	
Included in the scope of delivery:	
<ul style="list-style-type: none"> • Seal • Mounting material • Connecting cable (5 m long) 	
RS232 interface cable	3RK1922-2BP00
With optical interface to connect the SINAMICS G110D, SINAMICS G120D or SIMATIC ET 200pro FC inverters to the IOP Handheld (2.5 m long)	

Integration

Using the IOP with the frequency inverters

IOP	SINAMICS G120 with CU230P-2 Control Unit	SINAMICS G120 with CU240E or CU240S Control Unit	SINAMICS G110D and SINAMICS G120D
Plugging the IOP onto the inverter (power supply from the Control Unit)	✓	–	–
IOP door mounting with door mounting kit (power supply from the Control Unit)	✓	–	–
Mobile use of the IOP Handheld (supplied from rechargeable batteries)	✓	✓ PC Inverter Connection Kit required, 6SL3255-0AA00-2AA1	✓ RS232 interface cable with optical interface required, 3RK1922-2BP00

Mounting the IOP on a CU230P-2 Control Unit

The IOP can be directly plugged onto the CU230P-2 Control Unit.

CU230P-2 Control Unit with plugged on IOP

Mounting the IOP in a door

Using the optionally available door mounting kit, the IOP can be simply mounted in a control cabinet door with just a few manual operations (presently only available in conjunction with the SINAMICS G120 and CU230P-2 Control Unit). Degree of protection IP54/UL Type 12 is achieved when mounting in a door.

SINAMICS G120

Standard inverters 0.37 kW to 250 kW (0.5 hp to 400 hp)

Supplementary system components Basic Operator Panel BOP

Overview

The Basic Operator Panel BOP can be used to commission drives, monitor drives in operation and input individual parameter settings.

Values and units are displayed on a 5-digit display.

One BOP can be used for several inverters. It is plugged directly onto the CU240 Control Unit.

The BOP provides a function to quickly copy parameters. A parameter set of an inverter can be saved in the BOP and then downloaded to another inverter.

Note: The BOP is not suitable for the CU230P-2 Control Unit. The Intelligent Operator Panel IOP is available for this purpose.

Selection and ordering data

	Order No.
Basic Operator Panel BOP (not for Control Unit CU230P-2)	6SL3255-0AA00-4BA1

Integration

Example: CU240E Control Unit with mounted Basic Operator Panel BOP

SINAMICS G120

Standard inverters 0.37 kW to 250 kW (0.5 hp to 400 hp)

Supplementary system components
MMC memory card

Overview

The parameter settings for an inverter can be stored on the MMC memory card. When service is required, e.g. after the inverter has been replaced and the data have been downloaded from the memory card the drive system is immediately ready for use again.

- Parameter settings can be written from the MMC memory card to the inverter or saved from the inverter to the MMC memory card.
- Up to 100 parameter sets can be stored.
- Supports series commissioning without the use of additional commissioning tools (e.g. BOP and STARTER).
- Commissioning with the MMC memory card is defined by the user:
 - Parameter p8458 = 0 → parameter set 0 is never automatically downloaded from the MMC ("never")
 - Parameter p8458 = 1 → parameter set 0 is downloaded once after PowerOn ("once")
 - Parameter p8458 = 2 → parameter set 0 is always downloaded after PowerOn ("always")

Note:

The MMC memory card is not required for operation and does not have to remain inserted.

Note:

The CU240E Control Unit does not have a slot for the MMC memory card.

Integration

Example: Inserting the MMC memory card into a CU240 Control Unit

Example: CU240 Control Unit with inserted MMC memory card

SINAMICS G120

Standard inverters 0.37 kW to 250 kW (0.5 hp to 400 hp)

Supplementary system components CM240NE chemical industry module

Applications

Inverters for 400 V, 500 V and 690 V are required in the chemical industry that meet the special demands and requirements of this industry sector. The essential requirements and demands of the chemical industry are fulfilled using the SINAMICS G120 series of inverters supplemented by the CM240NE chemical industry module (with ATEX-certified PTC evaluation and a NAMUR terminal strip).

CM240NE chemical industry module

- Sine-wave filter integrated in the PM260 Power Modules (500 V to 690 V)
- A line reactor is not required for the PM260 and PM250 Power Modules
- PM250 and PM260 Power Modules are capable of energy recovery
- A series of inverters for the complete voltage and power range
- The integrated or external sine-wave filter permits unshielded motor cables up to 300 m; shielded motor cables are possible up to 200 m (carefully observe the max. length of the temperature sensor cable!)
- An extremely compact overall drive system can be achieved when using a PM260 Power Module, frame size FSD or FSF (the line reactor and sine-wave filter are not required, the chemical industry module is directly snapped onto the Power Module).

CM240NE chemical industry module without cover

Selection and ordering data

	Order No.
CM240NE chemical industry module new	6SL3255-0BT01-0PA0

Accessories

	Order No.
Supplementary kit for rail mounting comprising	new 6SL3260-4TA00-1AA6
<ul style="list-style-type: none"> • Adapter for rail mounting (acc. to DIN 50022, 35 × 15 mm) • Long cable harness 	

Design

- Compact, modular inverter
- Isolated analog inputs and outputs in the chemical industry module (1 setpoint / 2 measured values)
- Isolated digital inputs and outputs in the Control Unit
- Protective separation of the motor sensor cable with respect to the enclosure and other connections using reinforced insulation of the creepage and clearances (rated impulse voltage 12 kV) acc. to EN 60664 1
- Certified power disconnection (94/9/EC, ATEX) of the inverter without main contactor
- Forced inverter inhibit (EMERGENCY STOP function via STO)
- Terminal strip acc. to NE37, if fulfilled

The CM240NE chemical industry module has the following interfaces:

Designation	Description
PROFIBUS	9-pin, Sub-D connector or socket to connect PROFIBUS
X11 and X12	Parallel connection of the CM240NE chemical industry module with the Control Unit
X2	Terminal strip in accordance with NAMUR recommendation NE37 (2.5 mm ² screw terminals) <ul style="list-style-type: none"> • Digital inputs and outputs • Analog inputs and outputs
X3	Terminal strip in accordance with NAMUR recommendation NE37 (2.5 mm ² screw terminals) to connect the motor temperature sensor

Function

- Thermal motor protection (TMP) using the the PTC thermistor integrated in the motor (incl. protective separation up to 690 V line supplies)
- The analog inputs and outputs are electrically isolated (MW1 to 3)
- Provision of NAMUR terminal strip (-X2; -X3)

Integration

A chemical industry inverter comprises a SINAMICS G120 inverter (Power Module and Control Unit) and the CM240NE chemical industry module.

The CU240S DP-F is suitable as Control Unit. This is a Control Unit with integrated safety-oriented functions and PROFIBUS-DP interface.

The following Power Module versions are used:

- PM240 Power Module with DC braking function and brake chopper, 400 V line supply voltage
- PM250 Power Module with energy recovery capability, 400 V line supply voltage
- PM260 Power Module with energy recovery capability, 500 V to 690 V line supply voltage

Depending on the power unit, additional components may be necessary to complete the system.

Chemical industry inverter comprising PM240 Power Module, CU240S DP-F Control Unit with BOP and CM240NE chemical industry module

Additional information

A script file to parameterize the interconnections in line with the NAMUR assignment is available as download to commission the system using the STARTER commissioning tool.

SINAMICS G120

Standard inverters 0.37 kW to 250 kW (0.5 hp to 400 hp)

Supplementary system components PC Inverter Connection Kit -2

Overview

For controlling and commissioning an inverter directly from a PC, if the STARTER commissioning tool has been installed on the PC. With these, the inverter can be

- parameterized (commissioning, optimization)
- monitored (diagnostics)
- controlled (master control via the STARTER commissioning tool for test purposes).

A USB cable (3 m) and the STARTER commissioning tool ¹⁾ are included as scope of delivery on a DVD.

Selection and ordering data

	Order No.
PC Inverter Connection Kit -2 for CU230P-2 Control Units	new 6SL3255-0AA00-2CA0
Including USB cable (3 m) and STARTER commissioning tool ¹⁾ on DVD	

Supplementary system components PC Inverter Connection Kit

Overview

Example: PC Connection Kit for CU240 Control Units

For controlling and commissioning an inverter directly from a PC, if the STARTER commissioning tool has been installed on the PC. With these, the inverter can be

- parameterized (commissioning, optimization)
- monitored (diagnostics)
- controlled (master control via the STARTER commissioning tool for test purposes).

This is an isolated RS232 adapter board for a reliable point-to-point connection to a PC with a serial RS232 interface. A USB/RS232 adapter can be used as an alternative (e.g. type 12.02.1086R supplied by Roline).

The scope of delivery includes a 9-pin Sub-D connector, an RS232 standard cable (3 m) and the STARTER commissioning tool ¹⁾ on DVD.

Selection and ordering data

Standard inverters 0.37 kW to 250 kW (0.5 hp to 400 hp)

Supplementary system components
Brake Relay

Overview

The Brake Relay allows the Power Module to be connected to an electromechanical motor brake, thereby allowing the motor brake to be driven directly by the Control Unit.

Selection and ordering data

	Order No.
Brake Relay Including cable harness for connection to the Power Module	6SL3252-0BB00-0AA0

Integration

The Brake Relay has the following interfaces:

- A switch contact (NO contact) to control the motor brake solenoid
- A connection for the cable harness (CTRL) for connection to the Power Module

The Brake Relay can be installed on the shield bonding plate near the power terminals of the Power Module.

The supplied Brake Relay includes the cable harness for connection with the Power Module.

Connection example of a Brake Relay

Technical specifications

	Brake Relay
Max. switching capability of the NO contact	440 V AC / 3.5 A 30 V DC / 12 A
Max. conductor cross-section	2.5 mm ²
Degree of protection	IP20

Weight, approx.	0.17 kg

SINAMICS G120

Standard inverters 0.37 kW to 250 kW (0.5 hp to 400 hp)

Supplementary system components Safe Brake Relay

Overview

The Safe Brake Relay allows the Power Module to be safely connected to an electromechanical motor brake, allowing the brake to be directly and safely controlled by the Control Unit in accordance with EN 954-1 Safety Category 3 and IEC 61508 SIL 2.

Selection and ordering data

	Order No.
Safe Brake Relay	6SL3252-0BB01-0AA0
Including cable harness for connection to the Power Module	

Integration

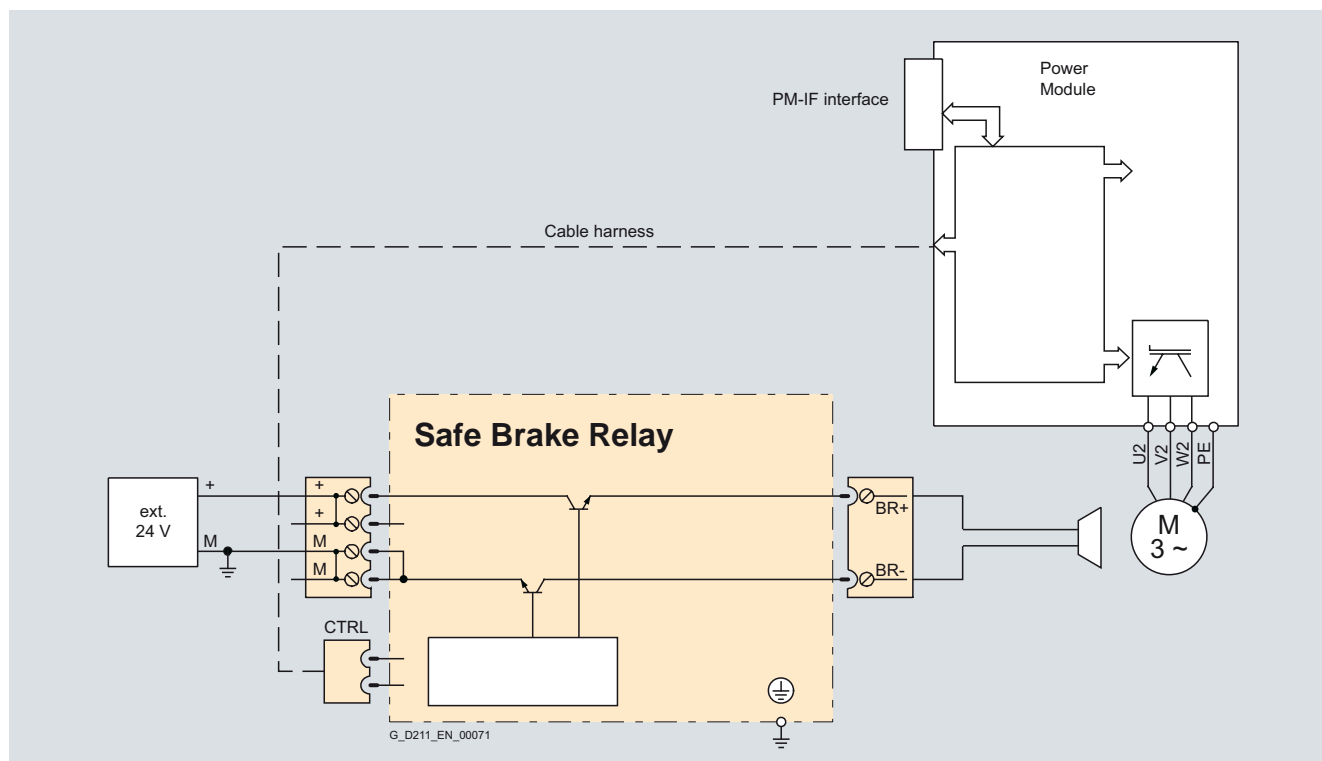

The Safe Brake Relay has the following interfaces:

- A two-channel transistor output stage to control the motor brake solenoid
- A connection for a 24 V DC power supply
- A connection for the cable harness (CTRL) for connection to the Power Module

The Safe Brake Relay can be mounted on the shield bonding plate near the power terminals of the Power Module.

The supplied Safe Brake Relay includes the cable harness for connection with the Power Module.

The 24 V DC solenoid of the motor brake is directly connected to the Safe Brake Relay. External surge suppressors are not required.

Connection example of a Safe Brake Relay

Technical specifications

	Safe Brake Relay
Supply voltage	20.4 ... 28.8 V DC Recommended rated value of the 26 V DC supply voltage (to equalize and compensate for the voltage drop along the feeder cable to the 24 V DC solenoid of the motor brake)
Max. current requirement of motor brake	2 A
Current requirement at 24 V DC, max.	0.005 A + the current requirement of motor brake

	Safe Brake Relay
Max. conductor cross-section	2.5 mm ²
Degree of protection	IP20
Dimensions	
• Width	68 mm
• Height	63 mm
• Depth	33 mm
Weight, approx.	0.17 kg

Standard inverters 0.37 kW to 250 kW (0.5 hp to 400 hp)

Supplementary system components
Adapter for mounting on DIN rails

Overview

The adapter for DIN rail mounting can be used to mount inverters, frame sizes FSA and FSB on DIN mounting rails (2 units with a center-to-center distance of 100 mm).

Furthermore, the motor cable shield connection and other cable shields required for mounting inverters on DIN rails comply with the same standards for emissions and conducted emissions as if the inverter were directly installed in a control cabinet.

The adapter for inverter frame size FSA can be used to mount converters singly or with matching line filter.

The adapter for inverter frame size FSB can be used to mount inverters with or without an integrated line filter.

Selection and ordering data

Adapter for mounting on DIN rails	Order No.
• for Power Module frame size FSA	6SL3262-1BA00-0BA0
• for Power Module frame size FSB	6SL3262-1BB00-0BA0

Supplementary system components
Shield Connection Kit

Overview

Example of Shield Connection Kit for Power Module frame size FSB

The Shield Connection Kit

- makes it easier to connect the shields of supply and control cables
- provides mechanical strain relief
- ensures optimum EMC performance
- is used to attach the Brake Relay and Safe Brake Relay

The Shield Connection Kit includes

- a shield bonding plate for the required Power Module
- a shield bonding plate for a CU240 Control Unit
- connection elements and clamps for mounting
- mounting device for Brake Relay or Safe Brake Relay – frame sizes FSB to FSF

Selection and ordering data

Shield Connection Kit	Order No.
• for PM240/PM250 Power Modules	
- Frame size FSA	6SL3262-1AA00-0BA0
- Frame size FSB	6SL3262-1AB00-0DA0
- Frame size FSC	6SL3262-1AC00-0DA0
- Frame sizes FSD and FSE	6SL3262-1AD00-0DA0
- Frame size FSF	6SL3262-1AF00-0DA0
• for PM260 Power Modules	
- Frame size FSD	6SL3262-1FD00-0CA0
- Frame size FSF	6SL3262-1FF00-0CA0

SINAMICS G120

Standard inverters 0.37 kW to 250 kW (0.5 hp to 400 hp)

Supplementary system components Shield Connection Kit 1 for CU230P-2

Overview

The Shield Connection Kit 1 for CU230P-2 Control Units offers for all signal and communication cables

- Optimum shield connection
- Strain relief

It contains the following:

- A matching shield bonding plate
- All of the necessary connecting and retaining elements for mounting

The Shield Connection Kit 1 is suitable for the following SINAMICS G120 Control Units:

- CU230P-2 HVAC
- CU230P-2 DP
- CU230P-2 CAN

Selection and ordering data

	Order No.
Shield Connection Kit 1 for CU230P-2 Control Units	new 6SL3264-1EA00-0FA0

Supplementary system components Shield Connection Kit for CU240S Control Units

Overview

The Shield Connection Kit for CU240S Control Units offers for all signal and communication cables

- Optimum shield connection
- Strain relief

It contains the following:

- A matching shield bonding plate
- All of the necessary connecting and retaining elements for mounting

The Shield Connection Kit is suitable for the following SINAMICS G120 Control Units:

- CU240S
- CU240S DP
- CU240S DP-F
- CU240S PN
- CU240S PN-F

Selection and ordering data

	Order No.
Shield Connection Kit For CU240S Control Units	new 6SL3264-1EA00-0EA0

Standard inverters 0.37 kW to 250 kW (0.5 hp to 400 hp)

Spare parts
CU240 Spare Parts Kit

Overview

The CU240 Spare Parts Kit includes:

- A replacement cover to cover the terminals
- A matching shield bar for the CU240E Control Unit, incl. screws
- A replacement connector for the CU240S Control Unit
- A protective element for the MMC card slot
- Screws to attach the shield bonding plate of the CU240S Control Unit

The CU240 Spare Parts Kit is suitable for the following SINAMICS G120 Control Units:

- CU240E
- CU240S
- CU240S DP
- CU240S DP-F
- CU240S PN
- CU240S PN-F

Selection and ordering data

	Order No.
CU240 Spare Parts Kit For CU240E and CU240S Control Units	new 6SL3200-0SK00-0AA0

Spare parts
Spare door for PM240 frame size FSGX

Overview

Complete replacement door for the PM240 Power Module frame size FSGX

Selection and ordering data

	Order No.
Replacement door for PM240 Power Module frame size FSGX	new 6SL3200-0SM10-0AA0

SINAMICS G120

Standard inverters 0.37 kW to 250 kW (0.5 hp to 400 hp)

Spare parts

Terminal Cover Kit for frame sizes FSD and FSE

Overview

The Terminal Cover Kit includes a replacement cover for the connecting terminals.

The Terminal Cover Kit is suitable for the following SINAMICS G120 Power Modules:

- PM240 frame sizes FSD and FSE
- PM250 frame sizes FSD and FSE

Selection and ordering data

	Order No.
Terminal Cover Kit for frame sizes FSD and FSE	new 6SL3200-0SM11-0AA0

Spare parts

Terminal Cover Kit for frame size FSF

Overview

The Terminal Cover Kit includes a replacement cover for the connecting terminals.

The Terminal Cover Kit is suitable for the following SINAMICS G120 Power Modules:

- PM240 frame size FSF
- PM250 frame size FSF
- PM260 frame size FSF

Selection and ordering data

	Order No.
Terminal Cover Kit for frame size FSF	new 6SL3200-0SM12-0AA0

SINAMICS G120

Standard inverters 0.37 kW to 250 kW (0.5 hp to 400 hp)

Spare parts
Spare connector

Overview

Replacement connector for the input and output sides.

The replacement connector is suitable for the following SINAMICS G120 PM260 Power Modules frame size FSD.

Selection and ordering data

	Order No.
Replacement connector for PM260 Power Modules frame size FSD	new 6SL3200-0ST04-0AA1

SINAMICS G120

Standard inverters 0.37 kW to 250 kW (0.5 hp to 400 hp)

Spare parts Replacement fan

Overview

The Power Module fans are designed for extra long service life. Replacement fans can be ordered for special applications.
