

Features:

- two-phase controlled soft starter
- controlled by microcontroller
- optimized soft start
- connection in the motor delta winding (cost saving via smaller rating)
- current and torque reduction during acceleration
- easy mounting, for snap-mounting on 35mm standard rail
- integrated bypass relay
- parameterization by means of three potentiometers
- no additional control voltage required
- no mains neutral conductor (N) required
- economically priced substitute for star-delta starters
- plug-in power terminals
- control outputs with spring-loaded terminals
- compact design, 45mm up to 32A and 52.5mm at 45A
- degree of protection IP20

Soft Starters
AC-VS II ...-17...45

Function:

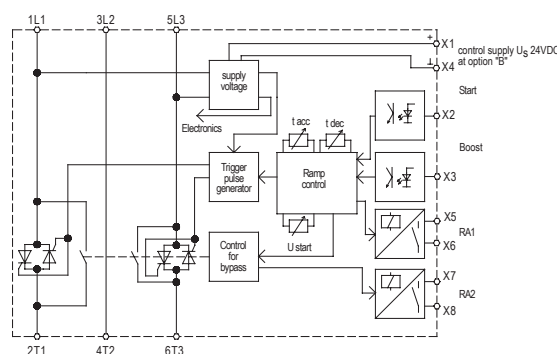

- soft acceleration and deceleration
- potential-free control input for soft acceleration and deceleration
- 3 separately adjustable parameters accel. time, start voltage, decel. time
- boost-start selectable
- potential-free relay output for operating state – unit bypassed – and failure

Typical Applications:

door and gate drives
pumps, ventilators, fans
conveying systems
packaging machines
transport systems, assembly lines
machine applications

Options (upon request)

- special voltages 230V and 480V
- wide voltage range 400-600V with external control supply voltage U_s 24VDC (B)
- signaling contact (M) beginning of acceleration until end of deceleration

Connection Diagram:**EMC**

The limit values for emitted interference according to the applicable device standards do not rule out the possibility that receivers and susceptible electronic devices within a radius of 10m are subjected to interference.

If such interference, which is definitely attributable to the operation of the soft starters "AC-VersiStart II ...", occurs, the emitted interference can be reduced by taking appropriate measures.

Such measures are, e.g.:

To connect reactors (3mH) or a suitable mains filter in series before the soft starter, or to connect X-capacitors (0.15μF) in parallel to the supply voltage terminals.
